## REGULATORY COMPLIANCE STATEMENT

Product(s) associated with this publication complies/comply with all applicable regulations. Please refer to the Technical Specifications section for more details.

## WARRANTY

ORing warrants that all ORing products are free from defects in material and workmanship for a specified warranty period from the invoice date (5 years for most products). ORing will repair or replace products found by ORing to be defective within this warranty period, with shipment expenses apportioned by ORing and the distributor. This warranty does not cover product modifications or repairs done by persons other than ORing-approved personnel, and this warranty does not apply to ORing products that are misused, abused, improperly installed, or damaged by accidents.

Please refer to the Technical Specifications section for the actual warranty period(s) of the product(s) associated with this publication.

## DISCLAIMER

Information in this publication is intended to be accurate. ORing shall not be responsible for its use or infringements on third-parties as a result of its use. There may occasionally be unintentional errors on this publication. ORing reserves the right to revise the contents of this publication without notice.

# **Getting to Know Your Switch**

## **1.1 About the IES-3082GC Managed Industrial Switch**

The IES-3082GC is a powerful managed industrial switch designed for extreme temperatures, dusty environments and high humidity. With 8 X 10/100Base-T(X) and 2 x Gigabit combo ports, the IES-3082GC can be managed via web browsers, TELNET, Console or other third-party SNMP software as well as ORing's proprietary management utility Open-Vision. The user-friendly and powerful interface of Open-Vision allows you to easily configure and monitor multiple switches at the same time.

## **1.2 Software Features**

- Supports O-Ring (Recovery time < 10ms over 250 units connection)
- Supports Ring Coupling, Dual Homing over O-Ring
- Supports SNMPv1/v2/v3 & RMON & Port base/802.1Q VLAN Network Management
- Event notification by email, SNMP trap, and relay output
- Web-based ,Telnet, Console (CLI) configuration
- Enable/disable ports, MAC based port security
- Port-based network access control (802.1x)
- Supports VLAN (802.1Q ) to segregate and secure network traffic
- Radius centralized password management
- SNMPv3 encrypted authentication and access security
- RSTP (802.1w)
- Quality of Service (802.1p) for real-time traffic
- VLAN (802.1Q) with double tagging and GVRP supported
- IGMP snooping for multicast filtering
- Port configuration, status, statistics, mirroring, security
- Remote monitoring (RMON)

## 1.3 Hardware Features

- Dual DC power inputs
- Wide operating temperature: -40 to 70°C
- Storage temperature: -40 to 85°C
- Operating humidity: 5% to 95%, non-condensing
- Casing: IP-30
- 10/100Base-T(X) Ethernet port
- 10/100/1000Base-T(X) Gigabit Ethernet port (in combo ports)
- 100/1000Base-X on SFP port (in combo ports)
- Console port
- Dimensions (W x D x H): 74.3 mm (W) x 109.2 mm (D) x 153.6 mm (H)

# Hardware Installation

## 2.1 DIN-rail Installation

Each switch comes with a DIN-rail kit which can be installed on the rear panel. With the DIN-rail kit, the switch can be fixed on a DIN-rail. Installing the switch on the DIN-rail is easy. First, screw the Din-rail kit onto the back of the switch, right in the middle of the back panel. Then slide the switch onto a DIN-rail from the Din-rail kit and make sure the switch clicks into the rail firmly.

Din-rail Kit Measurement

## 2.2 Wall Mounting

Besides Din-Rail, the switch can be fixed to the wall via a wall mount panel, which can be found in the package.

Wall-Mount Kit Measurement

To mount the switch onto the wall, follow the steps:

1. Screw the two pieces of wall-mount kits onto both ends of the rear panel of the switch. A total of six screws are required, as shown below.

2. Use the switch, with wall mount plates attached, as a guide to mark the correct locations of the four screws.

3. Insert four screw heads through the large parts of the keyhole-shaped apertures, and then slide the switch downwards. Tighten the four screws for added stability.

Note: Instead of screwing the screws in all the way, leave about 2 mm to allow room for sliding the wall mount panel between the wall and the screws.

# Hardware Overview

## 3.1 Front Panel

IES-3082GC comes with the following ports on the front panel:

Port	Description
<b>10/100 RJ-45 fast Ethernet ports</b>	8 10/100Base-T(X) RJ-45 fast Ethernet ports support auto-negotiation.  Default Setting: Speed: auto Duplex: auto Flow control: disable
<b>Gigabit RJ-45 ports</b>	2x 10/100/1000Base-T(X) Gigabit ports (in combo ports)
<b>SFP ports</b>	2x 100/1000Base-X on SFP port (in combo ports)
<b>Console</b>	Use RS-232 to RJ-45 cable to manage switch.
<b>Reset</b>	Push reset button 2 to 3 seconds to reset the switch.  Push reset button 5 seconds to return the switch to factory setting.

1. LED for PWR.
2. LED for PWR1.
3. LED for PWR2.
4. LED for R.M (Ring master).
5. LED for Ring.
6. LED for Fault Relay.
7. Console port (RJ-45).
8. Reset button.
9. 10/100Base-T(X) Ethernet ports.
10. LED indicating the speed of Ethernet ports
11. LED indicating the link status of Ethernet ports
12. 1000 COMBO ports with SFP
13. LED for SFP ports link/act status.

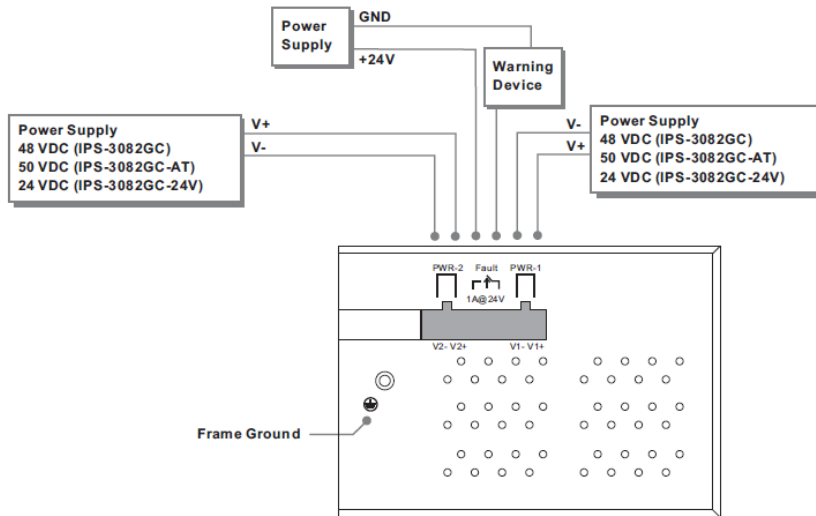

## 3.2 Front Panel LEDs

LED	Color	Status	Description
<b>PWR</b>	Green	On	DC power on
<b>PW1</b>	Green	On	DC power module 1 activated.
<b>PW2</b>	Green	On	DC power module 2 activated.
<b>R.M</b>	Green	On	O-Ring Master.
<b>Ring</b>	Green	On	O-Ring enabled.
		Slowly blinking	Ring structure is broken (i.e. part of the ring is disconnected)
		Fast blinking	Ring disabled
<b>Fault</b>	Amber	On	Faulty relay (power failure or port malfunctioning)
10/100Base-T(X) Fast Ethernet ports			
<b>LNK / ACT</b>	Green	On	Port link up.
		Blinking	Data transmitted.
<b>Full Duplex</b>	Amber	On	Port works under full duplex.
Gigabit Ethernet ports			
<b>ACT</b>	Green	On	Port link up.
		Blinking	Data transmitted.
<b>LNK</b>	Amber	On	Port link up.
SFP ports			
<b>LNK / ACT</b>	Green	On	Port link up.
		Blinking	Data transmitted.

## 3.3 Top Panel

Below are the top panel components of IES-3082GC series:

1. Terminal block
2. Ground wire

### 3.4 Rear Panel

On the rear panel of the switch sit three sets of screw holes. The two sets placed in triangular patterns on both ends of the rear panel are used for wall-mounting (red boxes in the figure below) and the set of four holes in the middle are used for Din-rail installation (blue box in the figure below).

# Cables

## 4.1 Ethernet Cables

The IES-3082GC switch has standard Ethernet ports. According to the link type, the switch uses CAT 3, 4, 5,5e UTP cables to connect to any other network devices (PCs, servers, switches, routers, or hubs). Please refer to the following table for cable specifications.

### Cable Types and Specifications

Cable	Type	Max. Length	Connector
10BASE-T	Cat.3, 4, 5 100-ohm	UTP 100 m (328 ft)	RJ-45
100BASE-TX	Cat.5 100-ohm UTP	UTP 100 m (328 ft)	RJ-45
1000BASE-TX	Cat.5/Cat.5e 100-ohm UTP	UTP 100 m (328ft)	RJ-45

### 4.1.1 100BASE-TX/10BASE-T Pin Assignments

With 1000/100BASE-TX/10BASE-T cables, pins 1 and 2 are used for transmitting data, and pins 3 and 6 are used for receiving data.

#### 10/100 Base-T RJ-45 Pin Assignments:

Pin Number	Assignment
1	BI_DA+
2	BI_DA-
3	BI_DB+
4	BI_DC+
5	BI_DC-
6	BI_DB-
7	BI_DD+
8	BI_DD-

The IES-3082GC series switches support auto MDI/MDI-X operation. You can use a cable to connect the switch to a PC. The table below shows the 10BASE-T/ 100BASE-TX MDI and MDI-X port pin outs.

10/100 Base-T MDI/MDI-X Pin Assignments:

Pin Number	MDI port	MDI-X port
1	TD+(transmit)	RD+(receive)
2	TD-(transmit)	RD-(receive)
3	RD+(receive)	TD+(transmit)
4	Not used	Not used
5	Not used	Not used
6	RD-(receive)	TD-(transmit)
7	Not used	Not used
8	Not used	Not used

1000 Base-T MDI/MDI-X Pin Assignments:

Pin Number	MDI port	MDI-X port
1	BI_DA+	BI_DB+
2	BI_DA-	BI_DB-
3	BI_DB+	BI_DA+
4	BI_DC+	BI_DD+
5	BI_DC-	BI_DD-
6	BI_DB-	BI_DA-
7	BI_DD+	BI_DC+
8	BI_DD-	BI_DC-

**Note:** "+" and "-" signs represent the polarity of the wires that make up each wire pair.

## 4.2 SFP

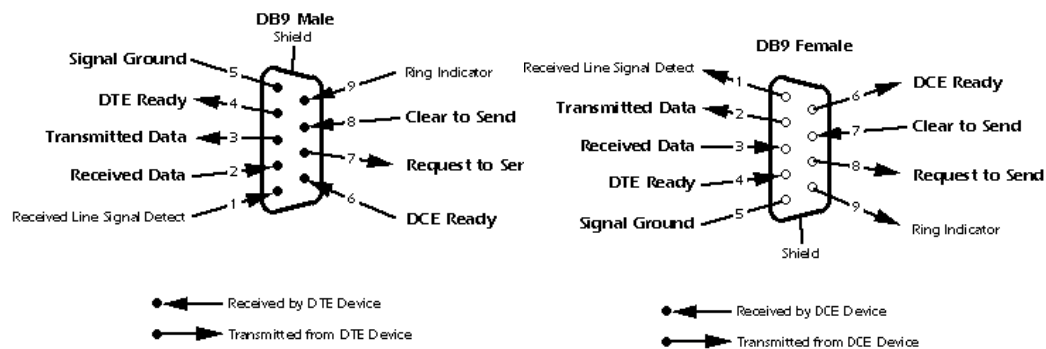

The switch comes with fiber optical ports that can connect to other devices using SFP modules. The fiber optical ports are in multi-mode (0 to 550M, 850 nm with 50/125  $\mu$ m, 62.5/125  $\mu$ m fiber) and single-mode with LC connectors. Please remember that the TX port of Switch A should be connected to the RX port of Switch B.

## 4.3 Console Cable

The IES-3082GC switch can be managed via console ports using a RS-232 cable which can be found in the package. You can connect the port to a PC via the RS-232 cable with a DB-9 female connector. The DB-9 female connector of the RS-232 cable should be connected the PC while the other end of the cable (RJ-45 connector) should be connected to the console port of the switch.

PC pin out (male) assignment	RS-232 with DB9 female connector	DB9 to RJ 45
Pin #2 RD	Pin #2 TD	Pin #2
Pin #3 TD	Pin #3 RD	Pin #3
Pin #5 GD	Pin #5 GD	Pin #5

# WEB Management

## 5.1 Configuration by Web Browser

This section introduces the configuration by Web browser.

### 5.1.1 About Web-based Management

The switch can be controlled via a built-in web server which supports Internet Explorer (Internet Explorer 5.0 or above versions) and other Web browsers such as Chrome. Therefore, you can manage and configure the switch easily and remotely. You can also upgrade firmware via a web browser. The Web management function not only reduces network bandwidth consumption, but also enhances access speed and provides a user-friendly viewing screen.

**Note:** By default, IE5.0 or later version does not allow Java Applets to open sockets. You need to explicitly modify the browser setting in order to enable Java Applets to use network ports.

### Preparing for Web Management

You can access the management page of the switch via the following default values:

IP Address: **192.168.10.1**

Subnet Mask: **255.255.255.0**

Default Gateway: **192.168.10.254**

User Name: **admin**

Password: **admin**

### System Login

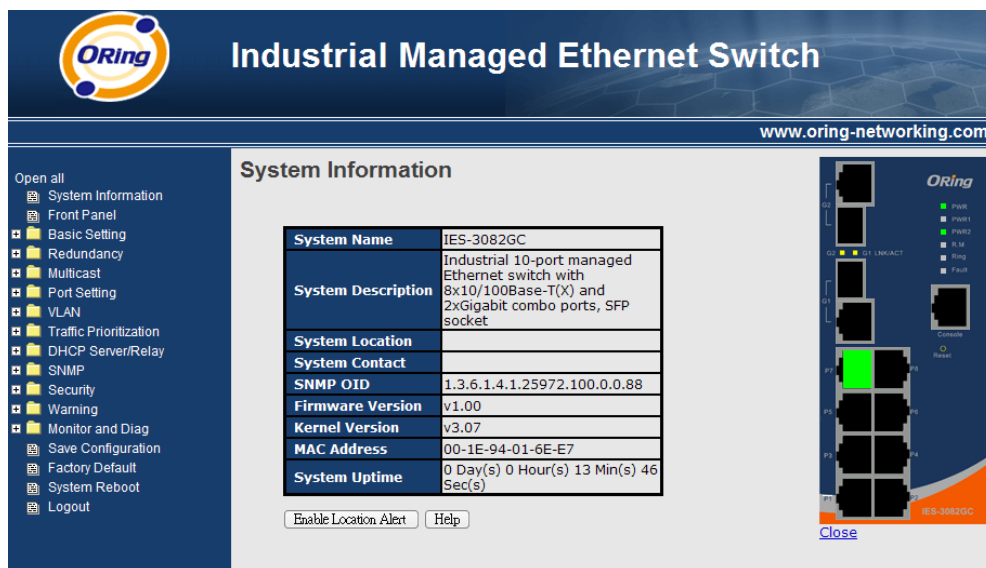

1. Launch the Internet Explorer.
2. Type http:// and the IP address of the switch. Press **Enter**.

1. A login screen appears.
2. Type in the username and password. The default username and password is **admin**.
3. Click **Enter** or **OK** button, the management Web page appears.

After logging in, you will see the screen below. On the right hand side of the management interface shows links to various settings. You can click on the links to access the configuration pages of different functions.

System Name	IES-3082GC
System Description	Industrial 10-port managed Ethernet switch with 8x10/100Base-T(X) and 2xGigabit combo ports, SFP socket
System Location	
System Contact	
SNMP OID	1.3.6.1.4.1.25972.100.0.0.88
Firmware Version	v1.00
Kernel Version	v3.07
MAC Address	00-1E-94-01-6E-E7
System Uptime	0 Day(s) 0 Hour(s) 13 Min(s) 46 Sec(s)

Click on the System Information on the right hand column will display the detailed information of the system, shown as below.

### System Information

<b>System Name</b>	IES-3082GC
<b>System Description</b>	Industrial 10-port managed Ethernet switch with 8x10/100Base-T(X) and 2xGigabit combo ports, SFP socket
<b>System Location</b>	
<b>System Contact</b>	
<b>SNMP OID</b>	1.3.6.1.4.1.25972.100.0.0.88
<b>Firmware Version</b>	v1.00
<b>Kernel Version</b>	v3.07
<b>MAC Address</b>	00-1E-94-01-6E-E7
<b>System Uptime</b>	0 Day(s) 0 Hour(s) 14 Min(s) 34 Sec(s)

The system information will display the configuration of the basic setting / switch setting pages. When clicking **Enable Location Alert**, PWR1, PWR2 and PWR3 LEDs on the switch will start to flash together. When you click **Disable Location Alert**, the LEDs will stop flashing.

### 5.1.3 Front Panel Configuration

Click **Front Panel** to show the front panel configuration of the switch or click **Close** to close the page.

## 5.1.4 Basic Setting

Basic Settings allow you to configure the basic functions of the switch.

### 5.1.4.1 Switch Setting

#### System Setting

<b>System Name</b>	<input type="text" value="IES-3082GC"/>
<b>System Description</b>	<input type="text" value="Industrial 10-port managed Ethernet switch with 8x10/100Base-T(X) and 2xGigabit"/>
<b>System Location</b>	<input type="text"/>
<b>System Contact</b>	<input type="text"/>

Label	Description
<b>System Name</b>	Assigns the name of switch. The maximum length is 64 bytes
<b>System Description</b>	Description of the device
<b>System Location</b>	Assigns physical switch location. The maximum length is 64 bytes
<b>System Contact</b>	Information of the contact person or organization

### 5.1.4.2 Admin Password

This page allows you to configure the system password required to access the web pages or log in from CLI.

#### Admin Password

<b>User Name</b>	<input type="text" value="admin"/>
<b>New Password</b>	<input type="text"/>
<b>Confirm Password</b>	<input type="text"/>

Label	Description
<b>User name</b>	The user name for operating the switch (default is <b>admin</b> )
<b>New Password</b>	The new system password (default is <b>admin</b> )
<b>Confirm password</b>	Re-type the new password
<b>Apply</b>	Click to save changes

### 5.1.4.3 IP Setting

You can configure IP information of the switch in this page.

## IP Setting

DHCP Client : Disable ▼

IP Address	192.168.10.1
Subnet Mask	255.255.255.0
Gateway	192.168.10.254
DNS1	0.0.0.0
DNS2	0.0.0.0

Apply
Help

Label	Description
<b>DHCP Client</b>	Enables or disables the DHCP client function. When DHCP client function is enabled, the switch will be assigned with an IP address by the network DHCP server. The default IP address will be replaced by the IP address assigned by the DHCP server. After clicking <b>Apply</b> , a popup dialog appears to inform when the DHCP client is enabled. The current IP will lose and you should find the new IP on the DHCP server.
<b>IP Address</b>	Assigns the IP address that the network is using. If DHCP client function is enabled, you do not need to assign the IP address. The network DHCP server will assign the IP address to the switch and it will be displayed in this column. The default IP is 192.168.10.1.
<b>Subnet Mask</b>	Assigns the subnet mask of the IP address. If DHCP client function is enabled, you do not need to assign the subnet mask
<b>Gateway</b>	Assigns the network gateway for the switch. The default gateway is 192.168.10.254
<b>DNS1</b>	Assigns the primary DNS IP address
<b>DNS2</b>	Assigns the secondary DNS IP address
<b>Apply</b>	Click to activate the configurations

### 5.1.4.4 Time Setting

This page includes configurations of SNTP and system clock.

#### System Clock

### Time Setting

System Clock

<b>System Clock</b>	Thu Jan 01 1970 00:39:12 GMT+0800 (台北標準時間)		
<b>System Date (YYYY/MM/DD)</b>	2012	Jun ▾	22 ▾
<b>System Time (hh:mm:ss)</b>	15	: 43	: 42

Label	Description
<b>System Clock</b>	This field shows the current system timer. The time stamp could be assigned manually or by a SNTP server.
<b>System Date</b>	Specifies the year, month and day of system clock (YYYY/MM/DD). Year: 2006-2015. Month: Jan-Dec. Day:1-31(28)
<b>System Time</b>	Specifies the hour, minute and second of system clock (hh:mm:ss). Hour:0-24, Minute:0-59, Second:0-59

#### SNTP

The SNTP (Simple Network Time Protocol) settings allow you to synchronize switch clocks in the Internet.

SNTP Client :  ▾

<b>UTC Timezone</b>	(GMT)Greenwich Mean Time: Dublin, Edinburgh, Lisbon, London ▾
<b>SNTP Server Address</b>	0.0.0.0

Daylight Saving Time :  ▾

<b>Daylight Saving Period</b>	2012 Jun 22 07 ~
<b>Daylight Saving Offset</b>	0 (hours)

Label	Description
<b>SNTP Client</b>	Enables or disables SNTP function to retrieve the time from the SNTP server.
<b>Daylight Saving Time</b>	Enables or disables daylight saving time function. When daylight saving time is enabled, you need to configure the daylight saving time period.
<b>UTC Time zone</b>	Sets the switch location time zone. The following table lists different location time zones for your reference.

Local Time Zone	Conversion from UTC	Time at 12:00 UTC
November Time Zone	- 1 hour	11 am
Oscar Time Zone	-2 hours	10 am
ADT - Atlantic Daylight	-3 hours	9 am
AST - Atlantic Standard EDT - Eastern Daylight	-4 hours	8 am
EST - Eastern Standard CDT - Central Daylight	-5 hours	7 am
CST - Central Standard MDT - Mountain Daylight	-6 hours	6 am
MST - Mountain Standard PDT - Pacific Daylight	-7 hours	5 am
PST - Pacific Standard ADT - Alaskan Daylight	-8 hours	4 am
ALA - Alaskan Standard	-9 hours	3 am
HAW - Hawaiian Standard	-10 hours	2 am
Nome, Alaska	-11 hours	1 am
CET - Central European FWT - French Winter MET - Middle European MEWT - Middle European Winter SWT - Swedish Winter	+1 hour	1 pm
EET - Eastern European, USSR Zone 1	+2 hours	2 pm
BT - Baghdad, USSR Zone 2	+3 hours	3 pm
ZP4 - USSR Zone 3	+4 hours	4 pm
ZP5 - USSR Zone 4	+5 hours	5 pm
ZP6 - USSR Zone 5	+6 hours	6 pm
WAST - West Australian Standard	+7 hours	7 pm
CCT - China Coast, USSR Zone 7	+8 hours	8 pm
JST - Japan Standard, USSR Zone 8	+9 hours	9 pm
EAST - East Australian Standard GST Guam Standard, USSR Zone 9	+10 hours	10 pm
IDLE - International Date Line NZST - New Zealand Standard	+12 hours	Midnight

NZT - New Zealand	
Label	Description
<b>SNTP Sever IP Address</b>	Sets SNTP server IP address.
<b>Daylight Saving Period</b>	Sets up the start and end time of daylight saving. Both will be different each year.
<b>Daylight Saving Offset</b>	Sets up the offset time
<b>Switch Timer</b>	Displays current time of the switch
<b>Apply</b>	Click to activate the configurations

### PTP Client

The Precision Time Protocol (PTP) is a time-transfer protocol defined in the IEEE 1588-2002 standard that allows precise synchronization of networks (e.g., Ethernet). Accuracy within the nanosecond range can be achieved with this protocol when using hardware generated timestamps.

Label	Description
<b>PTP Client</b>	Enables or disables PTP Client

#### 5.1.4.5 LLDP

LLDP (Link Layer Discovery Protocol) function allows the switch to advertise its information to other nodes on the network and store the information it discovers.

**LLDP**

LLDP Protocol:

LLDP Interval:  sec

**Neighbor Info Table**

Port	System Name	MAC Address	IP Address
Port. 8	IGS-3044GC	00-1E-94-3A-04-B0	192.168.10.20

Label	Description
<b>LLDP Protocol</b>	Enables or disables LLDP function
<b>LLDP Interval</b>	The interval of resend LLDP (by default at 30 seconds)
<b>Apply</b>	Click to set the configurations
<b>Help</b>	Shows help file
<b>Neighbor info table</b>	Shows neighbor device information

#### 5.1.4.6 Modbus TCP

This page shows Modbus TCP support of the switch. (For more information regarding Modbus, please visit <http://www.modbus.org/>)

**Modbus TCP**

Mode :

Label	Description
<b>Mode</b>	Enables or disables Modbus TCP function

#### 5.1.4.7 Auto Provision

This page allows you to update switch firmware automatically. You can put firmware or configuration files on a TFTP server. When you reboot the switch, it will upgrade automatically. Before updating, make sure you have your TFTP server ready and the firmware image and configuration file are on the TFTP server.

### Auto Provision

Auto install configuration file from TFTP server?

TFTP Server IP Address	192.168.10.66
Configuration File Name	data.bin

Auto install firmware image file from TFTP server?

TFTP Server IP Address	192.168.10.66
Firmware File Name	image.bin

#### 5.1.4.8 Backup & Restore

You can save current EEPROM value from the switch to a TFTP server, then go to the TFTP restore configuration page to restore the EEPROM value.

### Restore Configuration

From TFTP Server

TFTP Server IP Address	192.168.10.2
Restore File Name	data.bin

From Local PC

### Backup Configuration

To TFTP Server

TFTP Server IP Address	192.168.10.2
Backup File Name	data.bin

To Local PC

Label	Description
<b>TFTP Server IP Address</b>	Types in TFTP server IP
<b>Restore File Name</b>	Types in the file name
<b>Restore</b>	Click to restore the configurations
<b>Form Local PC</b>	User can select the file from a local PC instead of a TFTP server
<b>Restore File Name</b>	Types in the file name
<b>Restore</b>	Click to restore the configurations
<b>Backup</b>	Click to back up the configurations
<b>To Local PC</b>	User can download config file to the switch without using a TFTP server

#### 5.1.4.9 Upgrade Firmware

This page allows you to update the firmware of the switch. Before updating, make sure you have your TFTP server ready and the firmware image is on the TFTP server.

### Upgrade Firmware

From TFTP Server

<b>TFTP Server IP</b>	192.168.10.2
<b>Firmware File Name</b>	image.bin

From Local PC

### 5.1.1 Redundancy

#### 5.1.1.1 MRP

MRP (Media Redundancy Protocol) Ring (IEC 62439) can support up to 50 devices and will enable a back-up link in 80ms (adjustable to max. 200ms/500ms).

**MRP**

<input checked="" type="checkbox"/> <b>Enable</b>		
<input type="checkbox"/>	<input type="checkbox"/> <b>Manager</b> <input type="checkbox"/> <b>React on Link Change</b>	
1st Ring Port	G1	Linkdown
2nd Ring Port	G2	Forwarding
<input type="checkbox"/> <b>Force Speed/Duplex for 100BASE-TX</b>		

Label	Description
<b>Enable</b>	Enables MRP function
<b>Manager</b>	Every MRP topology needs a MRP manager. One MRP topology can only have a Manager. If two or more switches are set to be Manager, the MRP topology will fail.
<b>React on Link Change (Advanced mode)</b>	Faster mode. Enabling this function will cause MRP topology to converge more rapidly. This function only can be set in MRP manager switch.
<b>1<sup>st</sup> Ring Port</b>	Chooses the port which connects to the MRP ring
<b>2<sup>nd</sup> Ring Port</b>	Chooses the port which connects to the MRP ring
<b>Force Speed / Duplex for 100BASE-TX</b>	By default, Port Speed/Duplex is in auto-negotiation mode. Enabling this function will automatically change the Speed/Duplex of MRP Ring ports to <b>Full</b> mode.(this function is used in combination with Hirschmann Switch MRP as Hirschmann Switch MRP Ring port speed/duplex is always in Full mode).

### 5.1.1.2 O-Ring

O-Ring is ORing's proprietary redundant ring technology, with recovery time of less than 10 milliseconds and up to 250 nodes. It can reduce unexpected damage caused by network topology changes. O-Ring supports three Ring topologies: O-Ring, Coupling Ring and Dual Homing.

**O-Ring**

<input checked="" type="checkbox"/> <b>Enable Ring</b>		
<input type="checkbox"/> <b>Enable Ring Master</b>		
<b>1st Ring Port</b>	Port.01 ▾	LINKDOWN
<b>2nd Ring Port</b>	Port.02 ▾	LINKDOWN
<input type="checkbox"/> <b>Enable Couple Ring</b>		
<b>Couple Port</b>	Port.03 ▾	LINKDOWN
<input type="checkbox"/> <b>Enable Dual Homing</b>		
<b>Homing Port</b>	Port.05 ▾	LINKDOWN

Apply Help

Label	Description
<b>Enable Ring</b>	Check to enable Ring
<b>Enable Ring Master</b>	Only one ring master is allowed in a ring. However, if more than one switches are set to enable <b>Ring Master</b> , the switch with the lowest MAC address will be the active ring master and the others will be backup masters.
<b>1<sup>st</sup> Ring Port</b>	The primary port when the switch is ring master
<b>2<sup>nd</sup> Ring Port</b>	The backup port when the switch is ring master
<b>Enable Couple Ring</b>	Check to enable <b>Coupling Ring</b> . <b>Coupling Ring</b> can divide a big ring into two smaller rings to avoid network topology changes affecting all switches. It is a good method for connecting two rings.
<b>Coupling Port</b>	Ports for connecting multiple rings. A coupling ring needs four switches to build an active and a backup link. Links formed by the coupling ports will run in active/backup mode.
<b>Control Port</b>	Links to the control port of the switch in the same ring. Control ports are used to transmit control signals.
<b>Enable Dual Homing</b>	Check to enable <b>Dual Homing</b> . When <b>Dual Homing</b> is enabled, the ring will be connected to normal switches through two RSTP links (ex: backbone Switch). The two links work in active/backup mode, and connect each ring to the normal switches in RSTP mode.
<b>Apply</b>	Click to activate the configurations.

**Note:** due to heavy loading, setting one switch as ring master and coupling ring at the same time is not recommended.

### 5.1.1.3 Oen-Ring

Open-Ring technology can be applied to enable ORing's switches to work with other vendors' proprietary rings.

Label	Description
<b>Enable</b>	Enables Open-Ring function
<b>Vender</b>	Chooses the vendors that you want to join to their ring
<b>1<sup>st</sup> Ring Port</b>	Chooses the port which connects to the ring
<b>2<sup>nd</sup> Ring Port</b>	Chooses the port which connects to the ring

The application of Open-Ring is shown as below.

### 5.1.1.4 O-Chain

O-Chain is ORing's revolutionary network redundancy technology which enhances network redundancy for any backbone networks, providing ease-of-use and maximum fault-recovery swiftness, flexibility, compatibility, and cost-effectiveness in a set of network redundancy topologies. The self-healing Ethernet technology designed for distributed and complex industrial networks enables the network to recover in **less than 10ms** for up to 250 switches if at any time a segment of the chain fails.

O-Chain allows multiple redundant rings of different redundancy protocols to join and function together as a large and the most robust network topologies. It can create multiple redundant networks beyond the limitations of current redundant ring technologies.

O-Chain

<input checked="" type="checkbox"/> Enable			
	Uplink Port	Edge Port	State
1st	Port.01	<input type="checkbox"/>	Linkdown
2nd	Port.02	<input type="checkbox"/>	Forwarding

Apply

Label	Description
<b>Enable</b>	Checks to enable O-Chain function
<b>1<sup>st</sup> Ring Port</b>	Chooses the port which connects to the ring
<b>2<sup>nd</sup> Ring Port</b>	Chooses the port which connects to the ring
<b>Edge Port</b>	An O-Chain topology must begin with edge ports. The ports with a smaller switch MAC address will serve as the backup link and RM LED will light up.

### 5.1.1.5 RSTP – Repeater

RSTP-Repeater is a simple function which can directly pass RSTP BPDU packets. With this function, the devices will act as two RSTP devices connected.

### RSTP-Repeater

<input type="checkbox"/> <b>Enable</b>		
	<b>Uplink Port</b>	<b>RSTP Edge Port</b>
<b>1<sup>st</sup></b>	Port.01 ▾	<input type="checkbox"/>
<b>2<sup>nd</sup></b>	Port.02 ▾	<input type="checkbox"/>

Label	Description
<b>Enable</b>	Checks to enable RSTP-Repeater
<b>1<sup>st</sup> Ring Port</b>	Chooses the port which connects to the RSTP
<b>2<sup>nd</sup> Ring Port</b>	Chooses the port which connects to the RSTP
<b>Edge Port</b>	Only the edge device (connects to RSTP device) needs to specify an edge port. The user must specify the edge port according to the network topology.

### 5.1.1.6 Fast Recovery

Fast recovery mode can be set to connect multiple ports to one or more switches. The IES-3082GC with fast recovery mode will provide redundant links. Fast recovery mode supports 10 priorities. Only the first priority will be the active port, and the other ports with different priorities will be backup ports.

### Fast Recovery Mode

<input checked="" type="checkbox"/> Active
Port.01 Not included ▾
Port.02 Not included ▾
Port.03 Not included ▾
Port.04 Not included ▾
Port.05 Not included ▾

Label	Description
<b>Active</b>	Activates fast recovery mode
<b>port</b>	Ports can be set to 10 priorities. Only the port with the highest priority will be the active port. 1st Priority is the highest.
<b>Apply</b>	Click to activate the configurations

### 5.1.1.7 RSTP

The Rapid Spanning Tree Protocol (RSTP) is an evolution of the Spanning Tree Protocol. It provides faster spanning tree convergence after a network topology is changed. The system also supports STP and will automatically detect the connected devices running STP or RSTP protocols.

#### RSTP setting

You can enable/disable RSTP function, and set parameters for each port.

### RSTP - Bridge Setting

RSTP Mode	Enable ▾
Priority (0-61440)	32768
Max Age (6-40)	20
Hello Time (1-10)	2
Forward Delay Time (4-30)	15

Priority must be a multiple of 4096.  
 $2 * (\text{Forward Delay Time} - 1)$  should be greater than or equal to the Max Age.  
 The Max Age should be greater than or equal to  $2 * (\text{Hello Time} + 1)$ .

Apply Help

Label	Description
<b>RSTP mode</b>	You must enable or disable RSTP function before configuring related parameters
<b>Priority (0-61440)</b>	A value used to identify the root bridge. The bridge with the lowest value has the highest priority and is selected as the root. If the value changes, you must reboot the switch. The value must be multiple of 4096 according to the protocol standard rule.
<b>Max Age Time (6-40)</b>	The number of seconds a bridge waits without receiving spanning tree protocol configuration messages before attempting a reconfiguration. Enter a value between 6 through 40.
<b>Hello Time (1-10)</b>	The time that controls switch sends out the BPDU packet to check RSTP current status. Enter a value between 1 through 10.
<b>Forwarding Delay Time (4-30)</b>	The number of seconds a port waits before changing from its Rapid Spanning-Tree Protocol learning and listening states to the forwarding state. Enter a value between 4 through 30.
<b>Apply</b>	Click to set the configurations

**NOTE:** Follow the rule to configure the MAX Age, Hello Time, and Forward Delay Time.

$2 \times (\text{Forward Delay Time value} - 1) \geq \text{Max Age value} \geq 2 \times (\text{Hello Time value} + 1)$

The following tablet shows RSTP algorithm results.

Root Bridge Information	
<b>Bridge ID</b>	8000001E94011E7A
<b>Root Priority</b>	32768
<b>Root Port</b>	ROOT
<b>Root Path Cost</b>	0
<b>Max Age</b>	20
<b>Hello Time</b>	2
<b>Forward Delay</b>	15

## RSTP - Port Setting

Port	Path Cost (1-200000000)	Priority (0-240)	Admin P2P	Admin Edge	Admin Non Stp
Port.01 ▲ Port.02 ▢ Port.03 Port.04 Port.05 ▼	200000	128	auto ▼	true ▼	false ▼

priority must be a multiple of 16

Apply Help

## Port Status

Port	Path Cost	Port Priority	Oper P2P	Oper Edge	Stp Neighbor	State	Role
Port.01	200000	128	True	True	False	Disabled	Disabled
Port.02	200000	128	True	True	False	Disabled	Disabled
Port.03	200000	128	True	True	False	Disabled	Disabled
Port.04	200000	128	True	True	False	Disabled	Disabled
Port.05	200000	128	True	True	False	Disabled	Disabled

Label	Description
<b>Path Cost (1-200000000)</b>	The cost of the path to the other bridge. The range of valid values is 1 to 200000000.
<b>Port Priority (0-240)</b>	Configures the priority of the ports to be blocked in the LAN. The range of valid values is 0 to 240. The value of priority must be the multiple of 16
<b>Admin P2P</b>	Some of the rapid state transactions that are possible within RSTP are dependent upon whether the port concerned can only be connected to exactly one other bridge (i.e. It is served by a point-to-point LAN segment), or it can be connected to two or more bridges (i.e. It is served by a shared medium LAN segment). This function allows the P2P status of the link to be manipulated administratively. True means P2P enabling. False means P2P disabling.
<b>Admin Edge</b>	The port is directly connected to end stations, and it cannot create bridging loop in the network. To configure the port as an edge port, set the port to <b>True</b> .
<b>Admin Non</b>	The port includes the STP mathematic calculation. <b>True</b> does not include

<b>STP</b>	STP mathematic calculation. <b>False</b> includes the STP mathematic calculation.
<b>Apply</b>	Click to activate the configurations

### 5.1.1.8 MSTP

Multiple Spanning Tree Protocol (MSTP) is a standard protocol base on IEEE 802.1s. The function allows several VLANs to be mapped to a reduced number of spanning tree instances because most networks only need a few logical topologies. It supports load balancing scheme and the CPU is sparer than PVST (Cisco proprietary technology).

#### MSTP - Bridge Setting

<b>MSTP Enable</b>	Enable <input type="button" value="v"/>
<b>Force Version</b>	MSTP <input type="button" value="v"/>
<b>Configuration Name</b>	MSTP_SWITCH
<b>Revision Level (0-65535)</b>	0
<b>Priority (0-61440)</b>	32768
<b>Max Age Time (6-40)</b>	20
<b>Hello Time (1-10)</b>	2
<b>Forward Delay Time (4-30)</b>	15
<b>Max Hops (1-40)</b>	20

Priority must be a multiple of 4096.  
 $2 * (\text{Forward Delay Time} - 1)$  should be greater than or equal to the Max Age.  
 The Max Age should be greater than or equal to  $2 * (\text{Hello Time} + 1)$ .

Label	Description
<b>MSTP Enable</b>	You must enable or disable MSTP function before configuring related parameters.
<b>Force Version</b>	The parameter can be used to force a VLAN bridge that supports RSTP to operate in an STP-compatible manner.
<b>Configuration Name</b>	The same MST region must have the same MST configuration name.
<b>Revision Level (0-65535)</b>	The same MST region must have the same revision level.
<b>Priority (0-61440)</b>	A value used to identify the root bridge. The bridge with the lowest value has the highest priority and is selected as the root. If the value changes, you must reboot the switch. The value must be multiple of 4096 according to the protocol standard rule.
<b>Max Age Time(6-40)</b>	The number of seconds a bridge waits without receiving spanning-tree protocol configuration messages before attempting a reconfiguration. Enter a value between 6 through 40.
<b>Hello Time (1-10)</b>	Follow the rule below to configure the MAX Age, Hello Time, and Forward Delay Time for the switch which sends out BPDU packets to check RSTP current status. Enter a value between 1 through 10. $2 \times (\text{Forward Delay Time value} - 1) \geq \text{Max Age value} \geq 2 \times (\text{Hello Time value} + 1)$
<b>Forwarding Delay Time (4-30)</b>	The number of seconds a port waits before changing from its rapid spanning-tree protocol learning and listening states to the forwarding state. Enter a value between 4 through 30.
<b>Max Hops (1-40)</b>	This parameter is additional to those specified for RSTP. A single value applies to all spanning trees within an MST region (the CIST and all MSTIs) for which the bridge is the regional root.
<b>Apply</b>	Click to activate the configurations

## MSTP - Bridge Port

Port No.	Priority (0-240)	Path Cost (1-200000000, 0:Auto)	Admin P2P	Admin Edge	Admin Non Stp

Port.05		

Priority must be a multiple of 16

Apply

Label	Description
<b>Instance</b>	Sets the instance's information except CIST
<b>Port</b>	Selects the port you want to configure
<b>Priority (0-240)</b>	Configures the priority of the ports to be blocked in the LAN. Enter a number 0 through 240. The value of priority must be the multiple of 16
<b>Path Cost (1-200000000)</b>	The cost of the path to the other bridge. Enter a number 1 through 200000000.
<b>Apply</b>	Click to set the configurations.

## 5.1.2 Multicast

### 5.1.2.1 IGMP Snooping

Internet Group Management Protocol (IGMP) is used by IP hosts to register their dynamic multicast group membership. IGMP has 3 versions, IGMP v1, v2 and v3. Please refer to RFC 1112, 2236 and 3376. IGMP snooping improves the performance of networks that carry multicast traffic. It provides the ability to prune multicast traffic so that it travels only to those end destinations that require that traffic and reduces the amount of traffic on the Ethernet LAN.

### IGMP Snooping

IGMP Snooping : Enable V2 ▾

IGMP Query Mode: Disable ▾

Apply Help

IGMP Snooping Table

IP Address	VLAN ID	Member Port
230.0.0.20	1	Port.07

Label	Description
<b>IGMP Snooping Table</b>	Shows current IP multicast list
<b>IGMP Protocol</b>	Enables or disables IGMP snooping
<b>IGMP Query Mode</b>	Configures the switch to be the IGMP querier. There must be one and only one IGMP querier in an IGMP application. <b>Auto</b> means the querier is the one with a lower IP address.
<b>Apply</b>	Click to activate the configurations
<b>Help</b>	Shows help file

### 5.1.2.2 MVR

MVR allows different VLAN users to receive VLAN Multicast packets in MVR mode.

#### MVR

MVR Mode:

MVR VLAN:

Port	Type	Immediate Leave
Port.01	Inactive	<input type="checkbox"/>
Port.02	Inactive	<input type="checkbox"/>
Port.03	Inactive	<input type="checkbox"/>
Port.04	Inactive	<input type="checkbox"/>
Port.05	Inactive	<input type="checkbox"/>
Port.06	Inactive	<input type="checkbox"/>
Port.07	Inactive	<input type="checkbox"/>

Label	Description
<b>MVR Mode</b>	Enables or disables MVR mode
<b>MVR VLAN</b>	Sets MVR VLAN
<b>TYPE</b>	Sets port type to <b>inactive</b> , <b>Receiver</b> , or <b>Source</b>
<b>Immediate Leave</b>	Enables or disables immediate leave

### 5.1.2.3 Static Multicast Filtering

Static multicast filtering is the system by which end stations only receive multicast traffic if they register to join specific multicast groups. With multicast filtering, network devices only forward multicast traffic to the ports that are connected to registered end stations.

#### Static Multicast Filtering

Multicast IP Address :

Member Ports :

Port.01
  Port.02
  Port.03
  Port.04  
 Port.05
  Port.06
  Port.07
  Port.08  
 G1
  G2

	IP Address	Member Ports
<input type="checkbox"/>	230.0.0.6	Port.04, Port.05

Label	Description
<b>IP Address</b>	Assigns a multicast group IP address in the range of 224.0.0.0 ~ 239.255.255.255
<b>Member Ports</b>	Tick the check box beside the port number to include them as the member ports in the specific multicast group IP address.
<b>Add</b>	Shows current IP multicast list
<b>Delete</b>	Deletes an entry from table
<b>Help</b>	Shows help file.

## 5.1.3 Port Setting

### 5.1.3.1 Port Control

The function allows you to set the state, speed/duplex, flow control, and security of the port.

### Port Control

Port No.	State	Speed/Duplex	Flow Control	Security
Port.01	Enable	AutoNegotiation	Symmetric	Disable
Port.02	Enable	AutoNegotiation	Symmetric	Disable
Port.03	Enable	AutoNegotiation	Symmetric	Disable
Port.04	Enable	AutoNegotiation	Symmetric	Disable
Port.05	Enable	AutoNegotiation	Symmetric	Disable
Port.06	Enable	AutoNegotiation	Symmetric	Disable
Port.07	Enable	AutoNegotiation	Symmetric	Disable
Port.08	Enable	AutoNegotiation	Symmetric	Disable
G1	Enable	AutoNegotiation	Symmetric	Disable
G2	Enable	AutoNegotiation	Symmetric	Disable

Auto Detect 100/1000 SFP
Enable

Apply
Help

Label	Description
<b>Port NO.</b>	Port number for individual settings
<b>State</b>	Enables or disables the port
<b>Speed/Duplex</b>	You can set the value to <b>AutoNegotiation</b> , <b>100-full</b> , <b>100-half</b> , <b>10-full</b> , or <b>10-half</b> .
<b>Flow Control</b>	Supports symmetric and asymmetric modes to avoid packet loss when congestion occurred
<b>Security</b>	Enabling port security will disable MAC address learning in this

	port. Thus only the frames with MAC addresses in the port security list will be forwarded, otherwise will be discarded.
<b>Auto Detect 100/1000</b>	Automatically detects SFP port's SFP module speed (100M / 1000M)
<b>Apply</b>	Click to activate the configurations.

### 5.1.3.2 Port Status

The following page provides the status information of the current port.

#### Port Status

Port No.	Type	Link	State	Speed/Duplex	Flow Control
Port.01	100TX	Down	Enable	N/A	N/A
Port.02	100TX	Down	Enable	N/A	N/A
Port.03	100TX	Down	Enable	N/A	N/A
Port.04	100TX	Down	Enable	N/A	N/A

### 5.1.3.3 Port Alias

Users can define the name of each port and manage each port easily in this page.

#### Port Alias

Port No.	Port Alias
Port.01	<input type="text"/>
Port.02	<input type="text"/>
Port.03	<input type="text"/>
Port.04	<input type="text"/>
Port.05	<input type="text"/>

### 5.1.3.4 Rate Limit

This function allows you to limit traffic of all ports, including broadcast, multicast and flooded unicast. You can also set ingress or egress parameters to limit receiving or transmitting bandwidth.

## Rate Limit

Port No.	Ingress Limit Frame Type	Ingress	Egress
Port.01	All	0 kbps	0 kbps
Port.02	All	0 kbps	0 kbps
Port.03	All	0 kbps	0 kbps
Port.04	All	0 kbps	0 kbps
Port.05	All	0 kbps	0 kbps
Port.06	All	0 kbps	0 kbps
Port.07	All	0 kbps	0 kbps
Port.08	All	0 kbps	0 kbps
G1	All	0 kbps	0 kbps
G2	All	0 kbps	0 kbps

Note: rate range is from 100 kbps to 102400 kbps (i.e. 100Mbps) for mega-ports, or 256000 kbps (i.e. 250Mbps) for giga-ports. Zero means no limit.

Apply Help

Label	Description
<b>Ingress Limit Frame Type</b>	Available values include <b>all</b> , <b>Broadcast only</b> , <b>Broadcast/Multicast</b> and <b>Broadcast/Multicast/Flooded Unicast</b>
<b>Ingress</b>	Traffic received at the switch port
<b>Egress</b>	Traffic transmitted from the port
<b>Apply</b>	Click to activate the configurations

### 5.1.3.5 Port Trunking

You can select static trunk or 802.3ad LACP to combine several physical links with a logical link to increase the bandwidth.

### Port Trunk - Setting

Port No.	Group ID	Type
Port.01	None <input type="button" value="v"/>	Static <input type="button" value="v"/>
Port.02	None <input type="button" value="v"/>	Static <input type="button" value="v"/>
Port.03	None <input type="button" value="v"/>	Static <input type="button" value="v"/>
Port.04	None <input type="button" value="v"/>	Static <input type="button" value="v"/>
Port.05	None <input type="button" value="v"/>	Static <input type="button" value="v"/>
Port.06	None <input type="button" value="v"/>	Static <input type="button" value="v"/>
Port.07	None <input type="button" value="v"/>	Static <input type="button" value="v"/>
Port.08	None <input type="button" value="v"/>	Static <input type="button" value="v"/>
G1	None <input type="button" value="v"/>	Static <input type="button" value="v"/>
G2	None <input type="button" value="v"/>	Static <input type="button" value="v"/>

Note: the types should be the same for all member ports in a group.

### 802.3ad LACP Work Ports

Group ID	Work Ports
Trunk1	max <input type="button" value="v"/>
Trunk2	max <input type="button" value="v"/>
Trunk3	max <input type="button" value="v"/>
Trunk4	max <input type="button" value="v"/>
Trunk5	max <input type="button" value="v"/>

Label	Description
<b>Group ID</b>	Selects the ports to join a trunk group
<b>Type</b>	Supports static trunk and 802.3ad LACP
<b>Work Port</b>	Selects the number of active ports in dynamic group (LACP). The default value is the maximum number of the group. If the number is not the maximum number of ports, the other inactive ports in dynamic group will be suspended (no traffic). Once the active port is broken, the suspended port will be active automatically.
<b>Apply</b>	Click to activate the configurations

### Port Trunk – Status

### Port Trunk - Status

Group ID	Trunk Member	Type
Trunk 1	N/A	Static
Trunk 2	N/A	Static
Trunk 3	N/A	Static
Trunk 4	N/A	Static
Trunk 5	N/A	Static

Label	Description
<b>Group Key</b>	Trunk Group number
<b>Port Member</b>	Show Group port info

#### 5.1.3.6 Loop Guard

This feature prevents loop attack. When receiving loop packets, the port will be disabled automatically, preventing the loop attack from affecting other network devices.

### Loop Guard

Port No.	Active	Port State
Port.01	<input type="checkbox"/>	Enable
Port.02	<input type="checkbox"/>	Enable
Port.03	<input type="checkbox"/>	Enable

Label	Description
<b>Active</b>	Enables or disables loop guard
<b>Port Status</b>	Shows port work status

#### 5.1.4 VLAN

A Virtual LAN (VLAN) is logical network grouping that limits the broadcast domain, which allows you to isolate network traffic. Only the members of the VLAN will receive traffic from the same members of the VLAN. Basically, creating a VLAN from a switch is logically equivalent of reconnecting a group of network devices to another Layer 2 switch. However, all the network devices are still plugged into the same switch physically. The IES-3082GC switch supports port-based and 802.1Q (tagged-based) VLAN. The default configuration of VLAN operation mode is at **802.1Q**.

### 5.1.4.1 VLAN Setting- IEEE 802.1Q

Tagged-based VLAN is an IEEE 802.1Q specification standard that can create a VLAN with devices provided by different switch vendors. IEEE 802.1Q VLAN will insert a “tag” which contains a VLAN Identifier (VID) for indicating VLAN numbers into the Ethernet frames.

You can create Tag-based VLAN and enable or disable GVRP protocol. You can configure up to 256 VLAN groups. When enabling 802.1Q VLAN, all ports on the switch will belong to default VLAN whose VID is 1. The default VLAN cannot be deleted.

GVRP allows automatic VLAN configuration between the switch and nodes. If the switch is connected to a device with GVRP enabled, you can send a GVRP request by using the VID of a VLAN defined on the switch; the switch will automatically add that device to the existing VLAN.

### VLAN Setting

Port.03	<input type="text" value="Access"/> ▼	1	<input type="text" value="1"/>	<input type="text"/>

Label	Description
<b>VLAN Operation Mode</b>	Configures VLAN operation mode. Available values include <b>disable</b> , <b>Port Base</b> , and <b>802.1Q</b> .
<b>GVRP Mode</b>	Enables or disables GVRP function
<b>Management VLAN ID</b>	Management VLAN enables the network administrator to manage the switch in a secure VLAN environment. Only the devices in the management VLAN can access the switch.
<b>Port</b>	Selects the ports to be configured
<b>Link type</b>	There are three link types: <b>Access Link:</b> single switch only, allowing you to group ports by setting the same VID. <b>Trunk Link:</b> extended application of <b>Access Link</b> , allowing

	<p>you to group ports by applying the same VID to 2 or more switches.</p> <p><b>Hybrid Link:</b> Both <b>Access Link</b> and <b>Trunk Link</b> are available.</p> <p><b>Hybrid (QinQ) Link:</b> enables QinQ mode, allowing you to insert one more VLAN tags in an original VLAN frame.</p>
<b>Untagged VID</b>	Sets the port to default VLAN ID for untagged devices connected to the port. The range is 1 to 4094.
<b>Tagged VIDs</b>	Sets the tagged VIDs to carry different VLAN frames to other switch
<b>Apply</b>	Click to activate the configurations

#### 5.1.4.2 VLAN Setting – Port Based

Packets can only be transmitted to members of the same VLAN group. Note all unselected ports are treated as belonging to another single VLAN. If the port-based VLAN is enabled, the VLAN-tagging is ignored.

<b>Priority</b>	High ▾	High ▾	High ▾	High ▾	High ▾	High ▾	High ▾	High ▾
<b>DSCP</b>	<b>56</b>	<b>57</b>	<b>58</b>	<b>59</b>	<b>60</b>	<b>61</b>	<b>62</b>	<b>63</b>
<b>Priority</b>	High ▾	High ▾	High ▾	High ▾	High ▾	High ▾	High ▾	High ▾

<b>TOS/DSCP</b>	ToS (Type of Service) is a field in the IP header of a packet. This ToS field is also used by Differentiated Services and is thus called Differentiated Services Code Point (DSCP). The output priority of a packet can be determined by this field and the priority value ranges from 0 to 63. DSCP value maps to 4 priority queues: <b>High</b> , <b>Middle</b> , <b>Low</b> , and <b>Lowest</b> .
<b>Apply</b>	Click to activate the configurations
<b>Help</b>	Shows help file

### 5.1.6 DHCP Server

#### 5.1.6.1 Basic Setting

**DHCP Server - Basic Setting**

DHCP Server :  ▾

<b>Low IP Address</b>	<input type="text" value="192.168.10.2"/>
<b>High IP Address</b>	<input type="text" value="192.168.10.200"/>
<b>Subnet Mask</b>	<input type="text" value="255.255.255.0"/>
<b>Gateway</b>	<input type="text" value="192.168.10.254"/>
<b>DNS</b>	<input type="text" value="0.0.0.0"/>
<b>Lease Time (sec)</b>	<input type="text" value="604800"/>

The system provides DHCP server function which enables a switch to be a DHCP server when enabled.

Label	Description
<b>DHCP Server</b>	Enables or disables the DHCP server function. When enabled, the switch will be the DHCP server on your local network.
<b>Start IP Address</b>	The dynamic assignment range of IP addresses. The start IP address will be the smallest value. For example, if the dynamic range is from 192.168.1.100 to 192.168.1.200, 192.168.1.100 will be the start IP address.
<b>End IP Address</b>	The dynamic assignment range of IP addresses. The end IP address will be the largest value. For example: if the dynamic range is from 192.168.1.100 to 192.168.1.200, 192.168.1.200 will be the end IP address
<b>Subnet Mask</b>	Subnet mask for the dynamic assignment range of IP addresses
<b>Gateway</b>	Gateway in your network
<b>DNS</b>	The domain name server IP address in your network
<b>Lease Time (Hour)</b>	The period that system will reset the assigned dynamic IP to ensure the IP address is in use
<b>Apply</b>	Click to activate the configurations

### 5.1.6.2 DHCP Server – Client List

When the DHCP server function is activated, the system will collect the DHCP client information and display here.

#### DHCP Server - Client List

IP addr	Client ID	Type	Status	Lease
192.168.10.2	00:1E:94:3A:04:B0	dynamic	DHCP Offer	604798

### 5.1.6.3 DHCP Server – Port and IP Bindings

#### DHCP Server - Port and IP Binding

Port	IP
Port.01	192.168.10.123
Port.02	0.0.0.0
Port.03	0.0.0.0
Port.04	0.0.0.0
Port.05	0.0.0.0

You can assign a specific IP address in the dynamic assignment range to a specific port. When the device is connected to the port and asks for dynamic IP assigning, the system will assign the IP address that has been assigned before to the connected device.

### 5.1.6.4 DHCP Server –DHCP Relay Agent

The DHCP relay agent relays DHCP messages between clients and servers on different subnet domains. DHCP relay agent use Option 82 to insert specific information into a request that is being forwarded to a DHCP server, and removes the specific information from a reply packet according to Option 82 when forwarding server DHCP packets to a DHCP client.

#### DHCP Relay Agent

Mode : Enable ▼

Apply
Help

Label	Description
<b>DHCP Relay</b>	Enables or disables DHCP relay agent
<b>DHCP Server IP Address and VID</b>	Specifies IP address and VID of DHCP server. Keep <b>0.0.0.0</b> means the server is inactive.
<b>DHCP Option 82 Remote ID</b>	Provides a identifier for the remote server. Four types are supported: <b>IP</b> , <b>MAC</b> , <b>Client-ID</b> , and <b>Other</b> .

<b>DHCP Option 82 Circuit-ID Table</b>	Encodes an agent-local identifier of the circuit from which a DHCP client-to-server packet is received. It is intended for use by agents in relaying DHCP responses back to the proper circuit.
<b>Apply</b>	Click to activate the configurations.

## 5.1.7 SNMP

Simple Network Management Protocol (SNMP) is the protocol developed to manage nodes (servers, workstations, routers, switches and hubs etc.) on an IP network. SNMP enables network administrators to manage network performance, find and solve network problems, and plan for network growth. Network management systems learn of problems by receiving traps or change notices from network devices implementing SNMP.

### 5.1.7.1 SNMP – Agent Setting

You can set SNMP agent related information via Agent Setting.

#### SNMP - Agent Setting

SNMP Agent Version SNMPV1/V2c ▼

Apply

SNMP V1/V2c Community

Community String	Privilege
public	Read Only ▼
private	Read and Write ▼
<input style="width: 90%;" type="text"/>	Read Only ▼
<input style="width: 90%;" type="text"/>	Read Only ▼

Apply

Label	Description
<b>SNMP agent Version</b>	Three SNMP versions are supported: SNMP V1/SNMP V2c, and SNMP V3. SNMP V1/SNMP V2c agent uses a community string match for authentication, meaning SNMP servers access objects with read-only or read/write permissions in line with the default community string ( <b>public</b> or <b>private</b> ). SNMP V3 requires an authentication level of MD5 or DES to encrypt data to enhance data security.
<b>SNMP V1/V2c</b>	SNMP community should be set for SNMP V1/V2c. Four sets of

<b>Community</b>	community string/privilege are supported. Each community string can support up to 32 characters. Leave the setting to empty to remove this community string.
<b>Apply</b>	Click to activate the configurations
<b>Help</b>	Shows help file

### 5.1.7.2 SNMP –Trap Setting

A trap manager is a management station that receives traps. Traps are system alerts generated by the switch. If no trap manager is defined, no traps will be issued. You can create a trap manager by entering the IP address of the station and a community string. You can define management stations as trap manager by entering a SNMP community string and selecting the SNMP version.

#### SNMP - Trap Setting

##### Trap Server Setting

### 5.1.8 Security

You can enhance security of switch via the following settings: IP security, port security, MAC blacklist, and MAC address assigning and 802.1x protocol.

### 5.1.8.1 Management Security

Only the IP address in the secure IP list can manage the switch through your defined management mode (WEB, Telnet, SNMP).

Mode :

Enable WEB Management  
 Enable Telnet Management  
 Enable SNMP Management

Secure IP List

Secure IP1	0.0.0.0
Secure IP2	0.0.0.0

Label	Description
<b>IP security MODE</b>	Enables and disables the IP security function
<b>Enable WEB Management</b>	Checks to enable WEB management
<b>Enable Telnet Management</b>	Checks to enable Telnet management
<b>Enable SNMP Management</b>	Checks to enable MPSN management.
<b>Apply</b>	Click to activate the configurations
<b>Help</b>	Shows help file

### 5.1.8.2 Static MAC Forwarding

Static MAC forwarding adds static MAC addresses to hardware forwarding database. If port security is enabled on the **Port Control** page, only the frames with MAC addresses in this list will be forwarded, otherwise will be discarded.

MAC Address :

Port No :  ▼

	MAC Address	Port No.
<input type="checkbox"/>	001122334455	Port.06

Label	Description
<b>MAC Address</b>	Inputs MAC address to a specific port
<b>Port NO.</b>	Selects ports
<b>Add</b>	Adds an entry of MAC address and port information
<b>Delete</b>	Deletes entry
<b>Help</b>	Shows help file

### 5.1.8.3 MAC Blacklist

MAC blacklist can stop traffic from being forwarded to specific MAC addresses in the list. Any frames forwarded to the MAC addresses in this list will be discarded. Thus the target device will not receive any frame.

MAC Address :

	MAC Address
<input type="checkbox"/>	001E94123456

Label	Description
<b>MAC Address</b>	Inputs MAC address to MAC blacklist
<b>Port NO.</b>	Selects ports
<b>Add</b>	Adds an entry to blacklist table
<b>Delete</b>	Deletes entry
<b>Help</b>	Shows help file

#### 5.1.8.4 802.1x

##### 802.1x - Radius Server

802.1x uses the physical access characteristics of the IEEE802 LAN infrastructure to authorize devices attached to a LAN port. Please refer to IEEE 802.1X - Port Based Network Access Control for more information.

### 802.1x - Radius Server

Radius Server Setting

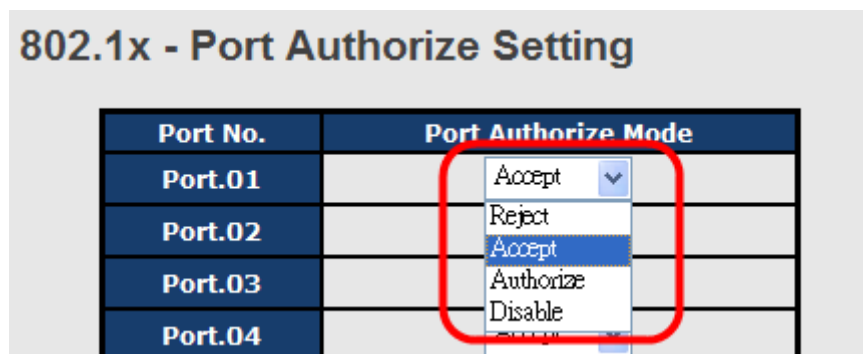

<b>802.1x Protocol</b>	Enable <input type="button" value="v"/>
<b>Radius Server IP</b>	<input type="text" value="192.168.16.3"/>
<b>Server Port</b>	<input type="text" value="1812"/>
<b>Accounting Port</b>	<input type="text" value="1813"/>
<b>Shared Key</b>	<input type="text" value="12345678"/>
<b>NAS, Identifier</b>	<input type="text" value="NAS_L2_SWITCH"/>

Advanced Setting

<b>Quiet Period</b>	<input type="text" value="60"/>
<b>TX Period</b>	<input type="text" value="30"/>
<b>Supplicant Timeout</b>	<input type="text" value="30"/>
<b>Server Timeout</b>	<input type="text" value="30"/>
<b>Max Requests</b>	<input type="text" value="2"/>
<b>Re-Auth Period</b>	<input type="text" value="3600"/>

Label	Description
<b>802.1x Protocol</b>	Enables or disables 802.1X Radius server
<b>Radius Server IP</b>	Shows the IP address of the authentication server
<b>Server port</b>	Configures UDP port number used by the authentication server for authentication
<b>Account port</b>	Configures UDP destination port for accounting requests to the specified Radius server
<b>Shared Key</b>	Key shared between this switch and authentication server
<b>NAS, Identifier</b>	String used to identify this switch.
<b>Quiet Period</b>	Configures the time interval between authentication failure and the start of a new authentication attempt
<b>Tx Period</b>	Configures the time that the switch can wait for response to an EAP request/identity frame from the client before resending the request
<b>Supplicant Timeout</b>	Configures the period of time the switch waits for a supplicant response to an EAP request
<b>Server Timeout</b>	Configures the period of time the switch waits for a Radius server response to an authentication request.
<b>Max Requests</b>	Configures the maximum number of times to retry sending packets to the supplicant.
<b>Re-Auth Period</b>	Configures the period of time after which clients connected must be re-authenticated.
<b>Apply</b>	Click to activate the configurations
<b>Help</b>	Shows help file

### 802.1x Port Authorization Setting

Label	Description
<b>Port Authorized Mode</b>	<b>Reject:</b> force this port to be unauthorized. <b>Accept:</b> force this port to be authorized. <b>Authorize:</b> the state of this port is determined by the outcome of the 802.1x authentication. <b>Disable:</b> this port will not participate in 802.1x
<b>Apply</b>	Click to activate the configurations
<b>Help</b>	Shows help file

### 802.1x Port Authorization State

**802.1x - Port Authorize State**

Port No.	Port Authorize State
Port.01	Accept
Port.02	Accept
Port.03	Accept
Port.04	Accept
Port.05	Accept
Port.06	Accept
Port.07	Accept
Port.08	Accept

### 5.1.8.5 IP Guard

#### IP Guard – Port Setting

This page allows you to configure port configuration of IP Guard. IP Guard is an intelligent and easy-to-use function for IP security. It protects the network from unknown IP (IPs which are not in the allowed list) attack. The illegal IP traffic will be blocked.

Port No.	Mode
Port.01	Monitor <input type="button" value="v"/>
Port.02	Security <input type="button" value="v"/>
Port.03	Disabled <input type="button" value="v"/>
Port.04	Disabled <input type="button" value="v"/>

Label	Description
<b>Mode</b>	<p><b>Disabled:</b> IP Guard is disabled</p> <p><b>Monitor:</b> IP Guard is disabled, but IP traffic will be monitored constantly.</p> <p><b>Security:</b> IP Guard is enabled and illegal IP traffic will be blocked.</p>
<b>Apply</b>	Click to activate the configurations.
<b>Help</b>	Shows help file

### IP Guard – Allow List

This page allows you to configure the IP Guard allowed list. IP traffic will be blocked if it is not in allowed list.

#### IP Guard - Allow List

Delete	IP	MAC	Port	Status
<input type="checkbox"/>	192.168.10.66	001E94112547	G1	Active <span style="font-size: small;">▼</span>

IP	MAC	Port	Status
<input style="width: 90%;" type="text"/>	<input style="width: 90%;" type="text"/>	Port.01 <span style="font-size: small;">▼</span>	Active <span style="font-size: small;">▼</span>

Label	Description
<b>IP</b>	IP address of the allowed entry
<b>MAC</b>	MAC address of the allowed entry
<b>Port</b>	Port number of the allowed entry
<b>Status</b>	<p>If you suspect some allowed IP traffic to be abnormal, you can block the traffic in this field.</p> <p>Active: allow the IP traffic.</p> <p>Suspend: block the IP traffic.</p>
<b>Delete</b>	If you want to delete the entry, please check this box and apply it.

### IP Guard – Super-IP List

This page allows you to configure the IP Guard Super-IP list. Super-IP entry has a special priority; the IP has no limitation on MAC address and port binding. Any IP traffic is allowed as long as the IP is in the Super-IP list.

#### IP Guard - Super-IP List

IP Address :

Super-IP List

IP Address

### IP Guard – Monitor List

#### IP Guard - Monitor List

Add to Allow List	IP	MAC	Port	Time
<input type="checkbox"/>	192.168.10.66	001E94988989	Port.08	19700103 19:20

Label	Description
<b>IP</b>	IP address of an entry.
<b>MAC</b>	MAC address of an entry
<b>Port</b>	Port number of an entry
<b>Time</b>	Logged time
<b>Add to Allow List</b>	If you want to allow the IP traffic, please check this box and apply it.

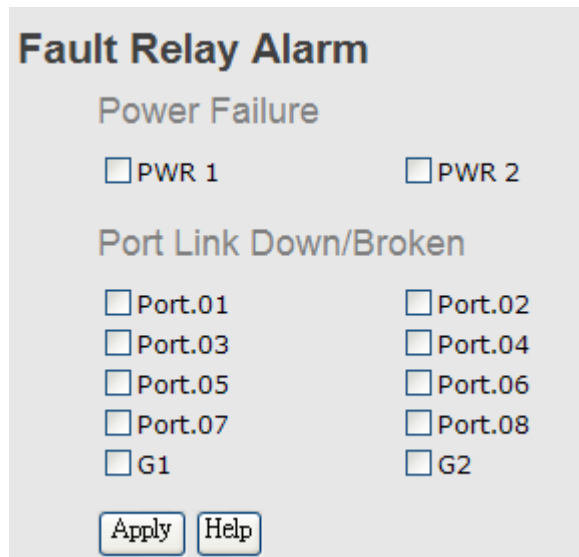

## 5.1.9 Warning

Warning function is very important for managing switches. You can manage a switch by SYSLOG, email, and fault relay. It helps you to monitor switch status on a remote site. When events occur, a warning message will be sent to your appointed server via email or the faulty relay function.

System alarm supports two warning mode, SYSLOG and email. You can monitor switches for selected system events.

### Warning – Fault Relay Alarm

When any selected event happens, the Fault LED on the switch panel will light up and the electric relay will send out signals at the same time.

**Fault Relay Alarm**

Power Failure

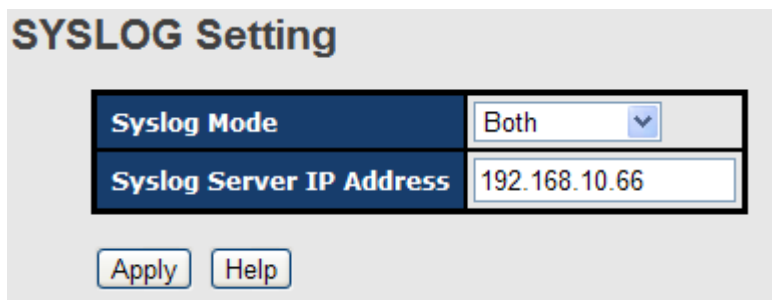

PWR 1                       PWR 2

Port Link Down/Broken

Port.01                       Port.02  
 Port.03                       Port.04  
 Port.05                       Port.06  
 Port.07                       Port.08  
 G1                               G2

### System Warning – SYSLOG Setting

SYSLOG is a protocol to transmit event notification messages across networks. Please refer to RFC 3164 - The BSD SYSLOG Protocol for more information.

**SYSLOG Setting**

Syslog Mode	Both
Syslog Server IP Address	192.168.10.66

Label	Description
<b>SYSLOG Mode</b>	<b>Disable:</b> disables SYSLOG. <b>Client Only:</b> logs to a local system <b>Server Only:</b> logs to a remote SYSLOG server <b>Both:</b> logs to both the local and remote servers
<b>SYSLOG Server IP Address</b>	IP address of the remote SYSLOG server
<b>Apply</b>	Click to activate the configurations
<b>Help</b>	Shows help file

### System Warning – SMTP Setting

SMTP (Simple Mail Transfer Protocol) is a protocol for transmitting e-mails across the Internet. Please refer to RFC 821 - Simple Mail Transfer Protocol for more information.

### SMTP Setting

E-mail Alert:

<b>SMTP Server IP Address :</b>	<input type="text" value="192.168.10.66"/>
<b>Mail Subject :</b>	<input type="text" value="Automated Email Alert"/>
<b>Sender :</b>	<input type="text" value="test mail"/>
<input type="checkbox"/> <b>Authentication</b>	
<b>Rcpt e-mail Address 1 :</b>	<input type="text" value="test@192.168.10.66"/>
<b>Rcpt e-mail Address 2 :</b>	<input type="text"/>
<b>Rcpt e-mail Address 3 :</b>	<input type="text"/>
<b>Rcpt e-mail Address 4 :</b>	<input type="text"/>

Label	Description
<b>E-mail Alert</b>	Enables or disables system to send out warning e-mail during an event
<b>SMTP Server IP Address</b>	Configures mail server IP address
<b>Mail Subject</b>	Subject of the mail
<b>Sender</b>	Configures the email account for send the alert
<b>Authentication</b>	<b>Username:</b> authorized username <b>Password:</b> authorized password <b>Confirm Password:</b> re-enter password

<b>Recipient E-mail Address</b>	The recipient's email address. Up to six recipients are supported in a mail.
<b>Apply</b>	Click to activate the configurations
<b>Help</b>	Shows help file

### System Warning – Event Selection

SYSLOG and SMTP are the two warning methods supported by the system. Check the corresponding box to enable the warning you want. Please note that the checkbox cannot be checked when SYSLOG or SMTP is disabled.

#### Event Selection

**System Event**

Event Type	Syslog	SMTP
Device cold start	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Device warm start	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Authentication failure	<input type="checkbox"/>	<input checked="" type="checkbox"/>
O-Ring topology change	<input type="checkbox"/>	<input checked="" type="checkbox"/>

**Port Event**

Port	Syslog	SMTP
Port.01	Link Down <input type="button" value="v"/>	Disable <input type="button" value="v"/>
Port.02	Disable <input type="button" value="v"/>	Link Up & Link Down <input type="button" value="v"/>

Label	Description
<b>Device cold start</b>	When the device executes cold start, the system will issue a log event.
<b>Device warm start</b>	When the device executes warm start, the system will issue a log event.
<b>Authentication Failure</b>	Alerts when SNMP authentication fails
<b>O-Ring topology change</b>	Alerts when O-Ring topology changes
<b>Port Event</b>	Available values include: <b>Disable</b> , <b>Link Up</b> , <b>Link Down</b> , and <b>Link Up &amp; Link Down</b>
<b>Apply</b>	Click to activate the configurations
<b>Help</b>	Shows help file

## 5.1.10 Monitor and Diag

### 5.1.10.1 System Event Log

If system log client is enabled, the system event log will be shown in this table.

### System Event Log

```

2: Jan 3 19:35:12 : SYSLOG Server:192.168.10.66
1: Jan 3 19:35:12 : SYSLOG Enable!
    
```

Page: 1

Label	Description
<b>Page</b>	Selects LOG page
<b>Reload</b>	Renews to show the newest event logs
<b>Clear</b>	Clear log
<b>Help</b>	Shows help file

### 5.1.10.2 MAC Address Table

#### MAC Address Table

Port No. :

Type	MAC Address	Port No.
Static	001122334455	Port.06
Dynamic	001E94988989	Port.08
Static	01005E000006	Port.05

Dynamic Address Count : 1  
Static Address Count : 2

#### MAC Address Aging Setting

MAC Address Aging Time:

Auto Flush Table When Ports Link Down:

MAC Address Auto Learning:

A MAC address table (Filtering Database) supports queries by the forwarding process, as to whether a frame received by a given port with a given destination MAC address is to be forwarded through a given potential transmission port.

Label	Description
<b>Port NO. :</b>	Shows all MAC addresses mapped to a selected port in the table
<b>Flush MAC Table</b>	Clears all MAC addresses in the table
<b>MAC Address Aging Time</b>	Assigns aging time; the value MUST be multiple of 15.
<b>Auto Flush Table When Ports Link Down</b>	When enabled, the switch will flush MAC table when port link is down.
<b>MAC Address Auto Learning</b>	Enables or disables MAC learning function
<b>Apply</b>	Click to activate the configurations

### 5.1.10.3 Port Overview

#### Port Overview

Port No.	Type	Link	State	TX Good Packet	TX Bad Packet	RX Good Packet	RX Bad Packet	TX Abort Packet	Packet Collision
Port.01	100TX	Down	Forwarding	0	0	0	0	0	0
Port.02	100TX	Down	Forwarding	0	0	0	0	0	0
Port.03	100TX	Down	Forwarding	0	0	0	0	0	0
Port.04	100TX	Down	Forwarding	0	0	0	0	0	0

Label	Description
<b>Type</b>	Shows port speed and media type
<b>Link</b>	Shows port link status
<b>State</b>	Shows ports enabled or disabled
<b>TX GOOD Packet</b>	The number of good packets sent by this port
<b>TX Bad Packet</b>	The number of bad packets sent by this port
<b>RX GOOD Packet</b>	The number of good packets received by this port
<b>RX Bad Packet</b>	The number of bad packets received by this port
<b>TX Abort Packet</b>	The number of packets aborted by this port
<b>Packet Collision</b>	The number of times a collision detected by this port
<b>Clear</b>	Clears all counters
<b>Help</b>	Shows help file

### 5.1.10.4 Port Counters

This page shows statistic counters for the port. The **Clear** button will reset all counters to zero.

Port No. :

<b>InGoodOctetsLo</b>	<b>InGoodOctetsHi</b>	<b>InBadOctets</b>	<b>OutFCSErr</b>
0	0	0	0
<b>InUnicasts</b>	<b>Deferred</b>	<b>InBroadcasts</b>	<b>InMulticasts</b>
0	0	0	0
<b>Octets64</b>	<b>Octets127</b>	<b>Octets255</b>	<b>Octets511</b>
0	0	0	0
<b>Octets1023</b>	<b>OctetsMax</b>	<b>OutOctetsLo</b>	<b>OutOctetsHi</b>
0	0	0	0
<b>OutUnicasts</b>	<b>Excessive</b>	<b>OutMulticasts</b>	<b>OutBroadcasts</b>
0	0	0	0
<b>Single</b>	<b>OutPause</b>	<b>InPause</b>	<b>Multiple</b>
0	0	0	0
<b>Undersize</b>	<b>Fragments</b>	<b>Oversize</b>	<b>Jabber</b>
0	0	0	0
<b>InMACRcvErr</b>	<b>InFCSErr</b>	<b>Collisions</b>	<b>Late</b>
0	0	0	0

Label	Description
<b>InGoodOctetsLo</b>	The lower 32-bits of the 64-bit InGoodOctets counter. The sum of lengths of all good Ethernet frames received, that is frames that are not bad frames.
<b>InGoodOctetsHi</b>	The upper 32-bits of the 64-bit InGoodOctets counter. The sum of lengths of all good Ethernet frames received, that is frames that are not bad frames.
<b>InBadOctets</b>	The sum of lengths of all bad Ethernet frames received.
<b>OutFCSErr</b>	The number of frames transmitted with a invalid FCS. Whenever a frame is modified during transmission(e.g., to add or remove a tag) the frames's original FCS is inspected before a new FCS is added to a modified frame. If the original FCS is invalid, the new FCS is made invalid too and this counter is incremented.
<b>InUnicasts</b>	The number of good frames received that have a Unicast destination MAC address.
<b>Deferred</b>	The total number of successfully transmitted frames that experienced no collisions bu are delayed because the medium was busy during the first attempt. This counter is applicable in half-duplex only.
<b>InBroadcasts</b>	The number of good frames received that have a Broadcast destination MAC address.
<b>InMulticasts</b>	The number of good frames received that have a Multicast destnation MAC address.

<b>Octets64</b>	Total frames received (and/or transmitted) with a length of exactly 64 octes, include those with errors.
<b>Octets127</b>	Total frames received (and/or transmitted) with a length of between 65 and 127 octes in clusive, including those with error.
<b>Octets255</b>	Total frames received (and/or transmitted) with a length of between 128 and 255 octes in clusive, including those with error.
<b>Octets511</b>	Total frames received (and/or transmitted) with a length of between 256 and 511 octes in clusive, including those with error.
<b>Octets1023</b>	Total frames received (and/or transmitted) with a length of between 512 and 1023 octes in clusive, including those with error.
<b>OctetsMax</b>	Total frames received (and/or transmitted) with a length of between 1024 and MaxSize octes in clusive, including those with error.
<b>OutOctetsLo</b>	The lower 32-bit of the 64-bit OutOctets counter. The sum of lengths of all Ethernet frames sent from this MAC.
<b>OutOctetsHi</b>	The upper 32-bit of the 64-bit OutOctets counter. The sum of lengths of all Ethernet frames sent from this MAC.
<b>OutUnicasts</b>	The number of frames sent that have an Unicast destination MAC address.
<b>Excessive</b>	The number frames dropped in the transmit MAC because the frame experienced 16 consecutive collisions. This counter is applicable in half-duplex only and only of DiscardExcessive is one.
<b>OutBroadcasts</b>	The number of good frames sent that have a Broadcast destination MAC address.
<b>Single</b>	The total number of successfully transmitted frames that experienced exactly one collision. This counter is applicable in half-duplex only.
<b>OutPause</b>	The number of good Flow Control frames sent.
<b>InPause</b>	The number of good Flow Control frames received.
<b>Multiple</b>	The total number of successfully transmitted frames that experienced more than one collision. This counter is applicable in half-duplex only.
<b>Undersize</b>	Total frames received with a length of less than 64 octets but with a valid FCS.
<b>Fragments</b>	Total frames received with a length of more than 64 octets and

	with a invalid FCS.
<b>Oversize</b>	Total frames received with a length of more than MaxSize octets but with a valid FCS.
<b>Jabber</b>	Total frames received with a length of more than MaxSize octets but with an invalid FCS.
<b>InMACRcvErr</b>	Total frames received with an RxErr signal from the PHY.
<b>InFCSErr</b>	Total frames received with a CRC error not counted in Fragments, Jabber or RxErr.
<b>Collisions</b>	The number of collision events seen by MAC not including those conted in Single, Multiple, Excessive or Late. This counter is applicable in half-duplex only.
<b>Late</b>	The number of times a collision is detected later than 512 bits-times into the transmission of a frame. This counter is applicable in half-duplex only.

### 5.1.10.5 Port Monitoring

Port monitoring function supports TX (egress) only, RX (ingress) only, and both TX/RX monitoring. TX monitoring sends any data that egress out checked TX source ports to a selected TX destination port as well. RX monitoring sends any data that ingress in checked RX source ports out to a selected RX destination port as well as sending the frame where it normally would have gone. Note that keep all source ports unchecked in order to disable port monitoring.

**Port Monitoring**

Port No.	Destination Port		Source Port	
	RX	TX	RX	TX
Port.01	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>
Port.02	<input type="radio"/>	<input type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>
Port.03	<input type="radio"/>	<input type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>
Port.04	<input type="radio"/>	<input type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>

Label	Description
<b>Destination Port</b>	The port will receive a copied frame from source port for monitoring purpose.
<b>Source Port</b>	The port will be monitored. Check in the boxes to configure TX or RX to be monitored.

<b>TX</b>	The frames sent to the switch port
<b>RX</b>	The frames receive at the switch port
<b>Apply</b>	Click to activate the configurations.
<b>Clear</b>	Clear all marked blank (disable the function)
<b>Help</b>	Shows help file

### 5.1.10.6 Traffic Monitor

The function allows you to monitor switch traffic. If traffic is too large, the switch will sent SYSLOG events or SMTP mails.

**Traffic Monitor**

Port No.	Monitored-Counter	Time-Interval (1~300s)	Increasing-Quantity
Port.01	RX Octet	3	1000
Port.02	RX Broadcast	3	1000
Port.03	RX Multicast	3	1000
Port.04	RX Unicast	3	1000
Port.05	RX Non-Unicast	3	1000
Port.06	Disable	3	1000

Label	Description
<b>Monitored –Counter</b>	Selects monitor type
<b>Time-Interval</b>	Sets interval time
<b>Increasing – Quantity</b>	Sets alarm quantity
<b>Event Alarm</b>	Selects alarm function (SYSLOG or SMTP)

### 5.1.10.7 SFP Monitor

SFP modules with DDM (Digital Diagnostic Monitoring) function can measure the temperature of the apparatus, helping you monitor the status of connection and detect errors immediately. You can manage and set up event alarms through DDM Web interface.

**SFP Monitor**

Port No.	Temperature (°C)	Vcc (V)	TX Bias (mA)	TX Power (µW)	RX Power (µW)
G1	N/A	N/A	N/A	N/A	N/A
G2	N/A	N/A	N/A	N/A	N/A

Warning Temperature :  °C(0~100)

Event Alarm :  Syslog  SMTP

Label	Description
<b>Warning Temperature</b>	Sets warning temperature
<b>Event Alarm</b>	Selects warning method (SYSLOG or SMTP)

### 5.1.10.8 Ping

This page allows you to issue ICMP PING packets to troubleshoot IP connectivity issues.

**Ping**

IP Address :

**Ping Log**

Pinging 192.168.10.66: seq 1 sent...  
Reply seq 1 from 192.168.10.66

Pinging 192.168.10.66: seq 2 sent...  
Reply seq 2 from 192.168.10.66

Label	Description
<b>IP Address</b>	Enter the IP address you want to detect
<b>Active</b>	Click to send ICMP packets

### 5.1.11 Save Configuration

If any configuration is changed, you should click **Save** to save current configuration data to the permanent flash memory. Otherwise, the current configuration will be lost when power is off or system is reset.

**Save Configuration**

Label	Description
<b>Save</b>	Saves all configurations
<b>Help</b>	Shows help file

### 5.1.12 Factory Default

Reset the switch to default configurations. Click **Reset** to reset all configurations to the default value. You can select **Keep current IP address setting** and **Keep current username & password** to keep current IP and username and password.

### Factory Default

- Keep current IP address setting?
- Keep current username & password?

### 5.1.13 System Reboot

You can reset the stack switch on this page. After reset, the system will boot normally as if you have powered on the devices.

#### System Reboot

Boot from:

- image bank 0 (k3.04 v1.00 built at May 21 2012,13:54:14)
- image bank 1: empty

# Command Line Interface Management

## 6.1 About CLI Management

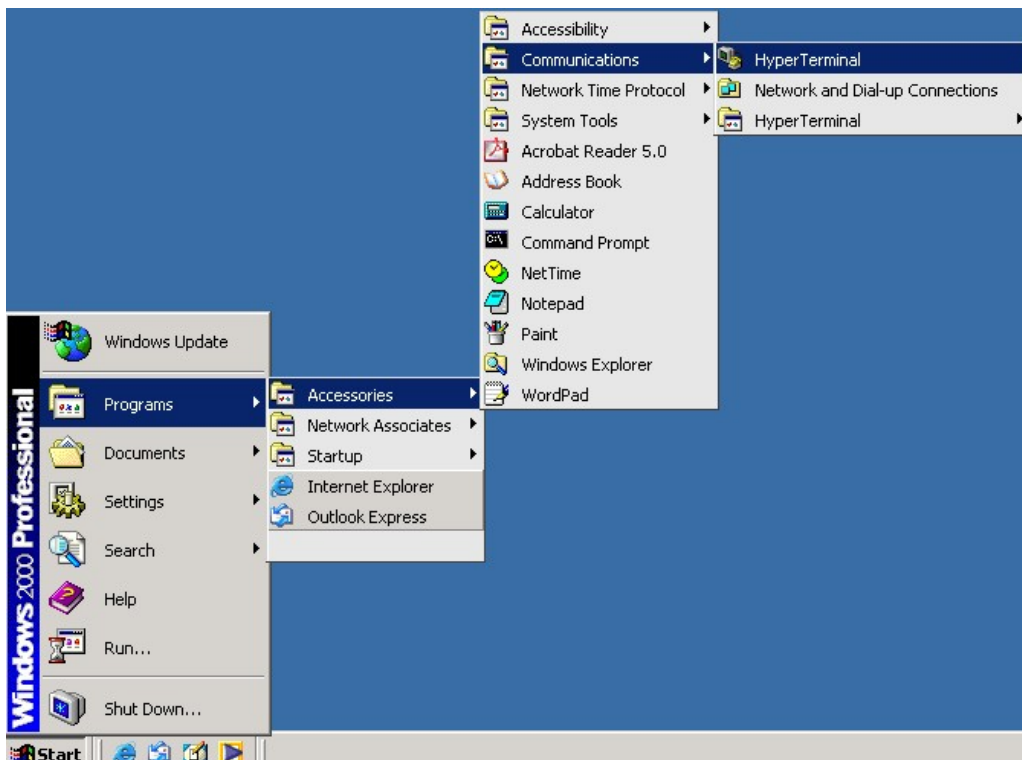

Besides Web-based management, the switch also supports CLI management. You can use console or telnet to manage the switch by CLI.

### CLI Management by RS-232 Serial Console (9600, 8, none, 1, none)

Before configuring RS-232 serial console, connect the RS-232 port of the switch to your PC Com port using a RJ45 to DB9-F cable.

Follow the steps below to access the console via RS-232 serial cable.

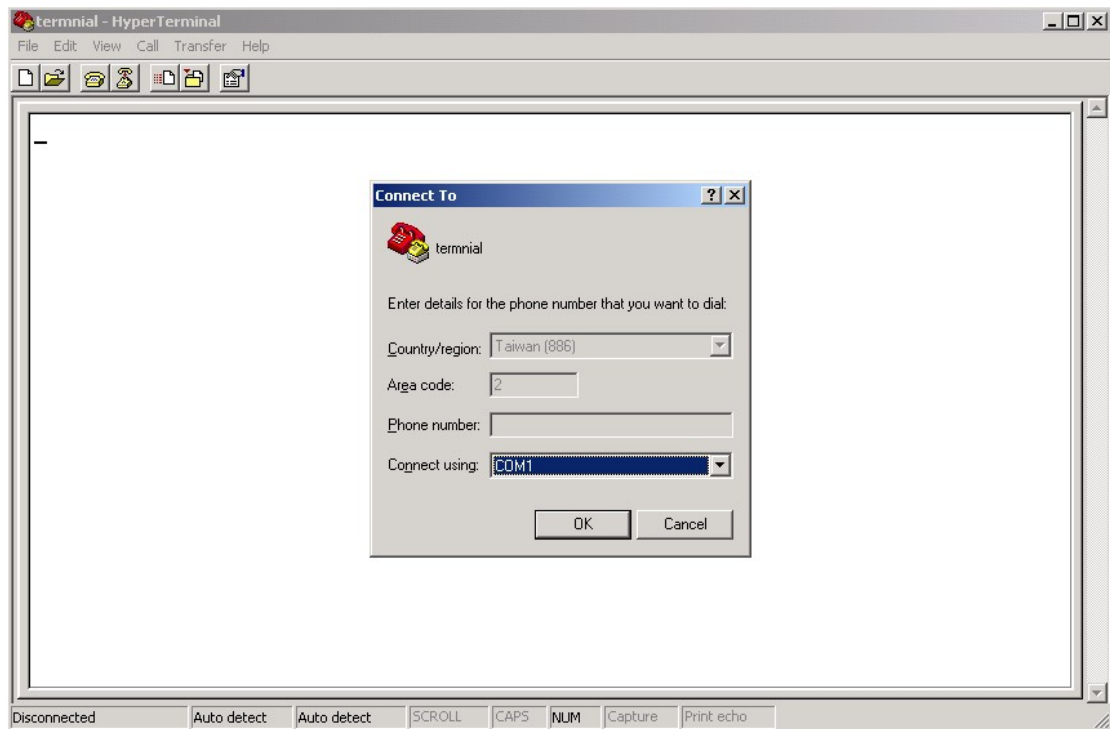

Step 1. On Windows desktop, click on **Start -> Programs -> Accessories -> Communications -> Hyper Terminal**

### Step 2. Input a name for new connection

### Step 3. Select a COM port in the drop-down list

Step 4. A pop-up window that indicates COM port properties appears, including bits per second, data bits, parity, stop bits, and flow control.

Step 5. The console login screen will appear. Use the keyboard to enter the Username and Password (same as the password for Web browsers), then press **Enter**.

IES-3082GC  
Command Line Interface

Username : \_  
Password :

### CLI Management by Telnet

Users can use **TELNET** to configure the switches. The default value is as below:

IP Address: **192.168.10.1**

Subnet Mask: **255.255.255.0**

Default Gateway: **192.168.10.254**

User Name: **admin**

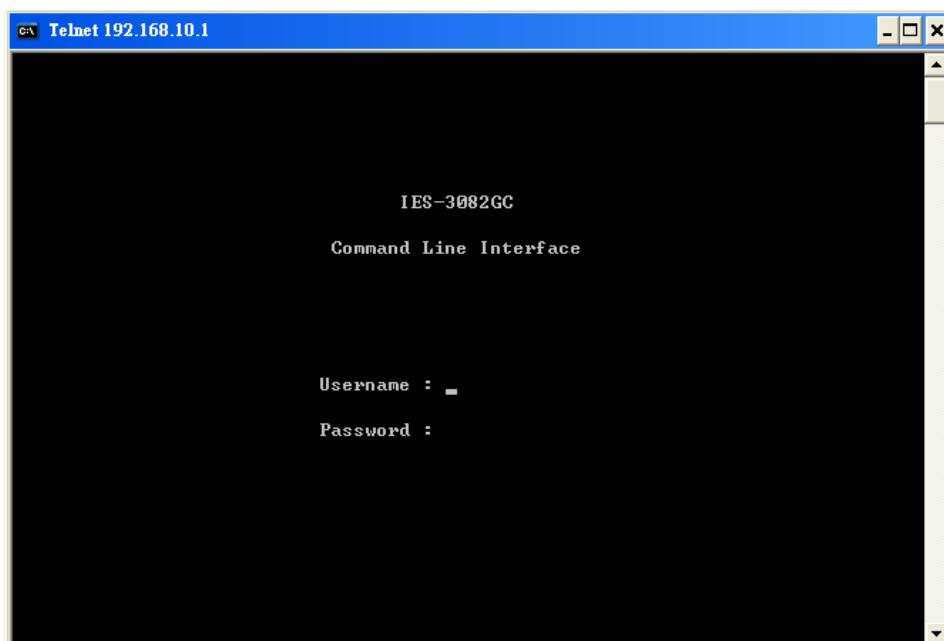

Password: **admin**

Follow the steps below to access the console via Telnet.

Step 1. Telnet to the IP address of the switch from the **Run** window by inputting commands (or from the MS-DOS prompt) as below.

Step 2. The Login screen will appear. Use the keyboard to enter the Username and Password (same as the password for Web browser), and then press **Enter**.

**Commands Level**

Modes	Access Method	Prompt	Exit Method	About This Model
User EXEC	Begin a session with your switch.	switch>	Enter <b>logout</b> or <b>quit</b> .	The user command available at the level of user is the subset of those available at the privileged level. Use this mode to <ul style="list-style-type: none"> <li>• Enter menu mode.</li> <li>• Display system information.</li> </ul>
Privileged EXEC	Enter the <b>enable</b> command while in user EXEC mode	switch#	Enter <b>disable</b> to exit.	The privileged command is advance mode Privileged this mode to <ul style="list-style-type: none"> <li>• Display advance function status</li> <li>• Save configures</li> </ul>
Global configuration	Enter the <b>configure</b> command while in privileged EXEC mode	switch(c onfig)#	To exit to privileged EXEC mode, enter <b>exit</b> or <b>end</b>	Use this mode to configure parameters that apply to your switch as a whole
VLAN database	Enter the <b>vlan database</b> command while in privileged EXEC mode	switch(v lan)#	To exit to user EXEC mode, enter <b>exit</b> .	Use this mode to configure VLAN-specific parameters.
Interface configuration	Enter the <b>interface</b> command (with a specific interface) while in global configuration mode	switch(c onfig-if) #	To exit to global configuration mode, enter <b>exit</b> . To exist privileged EXEC mode or <b>end</b> .	Use this mode to configure parameters for the switch and Ethernet ports

**Symbol of Command Level**

Mode	Symbol of Command Level

Privileged EXEC	P
Global configuration	G
VLAN database	V
Interface configuration	I

**6.2 Command Set List—System Command Set**

Commands	Level	Description	Example
<b>show config</b>	E	Show switch configuration	switch>show config
<b>show terminal</b>	P	Show console information	switch#show terminal
<b>write memory</b>	P	Save your configuration into permanent memory (flash rom)	switch#write memory
<b>system name</b> [System Name]	G	Configure system name	switch(config)#system name xxx
<b>system location</b> [System Location]	G	Set switch system location string	switch(config)#system location xxx
<b>system description</b> [System Description]	G	Set switch system description string	switch(config)#system description xxx
<b>system contact</b> [System Contact]	G	Set switch system contact window string	switch(config)#system contact xxx
<b>show system-info</b>	E	Show system information	switch>show system-info
<b>ip address</b> [Ip-address] [Subnet-mask] [Gateway]	G	Configure the IP address of switch	switch(config)#ip address 192.168.1.1 255.255.255.0 192.168.1.254
<b>ip dhcp</b>	G	Enable DHCP client function of switch	switch(config)#ip dhcp
<b>show ip</b>	P	Show IP information of switch	switch#show ip
<b>no ip dhcp</b>	G	Disable DHCP client function of switch	switch(config)#no ip dhcp
<b>reload</b>	G	Halt and perform a cold restart	switch(config)#reload
<b>default</b>	G	Restore to default	Switch(config)#default

<b>admin username</b> [Username]	<b>G</b>	Changes a login username. (maximum 10 words)	switch(config)#admin username xxxxxx
<b>admin password</b> [Password]	<b>G</b>	Specifies a password (maximum 10 words)	switch(config)#admin password xxxxxx
<b>show admin</b>	<b>P</b>	Show administrator information	switch#show admin
<b>dhcpserver enable</b>	<b>G</b>	Enable DHCP Server	switch(config)#dhcpserver enable
<b>dhcpserver lowip</b> [Low IP]	<b>G</b>	Configure low IP address for IP pool	switch(config)# dhcpserver lowip 192.168.1.1
<b>dhcpserver highip</b> [High IP]	<b>G</b>	Configure high IP address for IP pool	switch(config)# dhcpserver highip 192.168.1.50
<b>dhcpserver subnetmask</b> [Subnet mask]	<b>G</b>	Configure subnet mask for DHCP clients	switch(config)#dhcpserver subnetmask 255.255.255.0
<b>dhcpserver gateway</b> [Gateway]	<b>G</b>	Configure gateway for DHCP clients	switch(config)#dhcpserver gateway 192.168.1.254
<b>dhcpserver dnsip</b> [DNS IP]	<b>G</b>	Configure DNS IP for DHCP clients	switch(config)# dhcpserver dnsip 192.168.1.1
<b>dhcpserver leasetime</b> [Hours]	<b>G</b>	Configure lease time (in hour)	switch(config)#dhcpserver leasetime 1
<b>dhcpserver ipbinding</b> [IP address]	<b>I</b>	Set static IP for DHCP clients by port	switch(config)#interface fastEthernet 2 switch(config-if)#dhcpserver ipbinding 192.168.1.1
<b>show dhcpserver configuration</b>	<b>P</b>	Show configuration of DHCP server	switch#show dhcpserver configuration
<b>show dhcpserver clients</b>	<b>P</b>	Show client entries of DHCP server	switch#show dhcpserver clients
<b>show dhcpserver ip-binding</b>	<b>P</b>	Show IP-Binding information of DHCP server	switch#show dhcpserver ip-binding
<b>no dhcpserver</b>	<b>G</b>	Disable DHCP server function	switch(config)#no dhcpserver
<b>security enable</b>	<b>G</b>	Enable IP security function	switch(config)#security enable
<b>security http</b>	<b>G</b>	Enable IP security of HTTP server	switch(config)#security http

<b>security telnet</b>	<b>G</b>	Enable IP security of telnet server	switch(config)#security telnet
<b>security ip</b> [Index(1..10)] [IP Address]	<b>G</b>	Set the IP security list	switch(config)#security ip 192.168.1.55
<b>show security</b>	<b>P</b>	Show the information of IP security	switch#show security
<b>no security</b>	<b>G</b>	Disable IP security function	switch(config)#no security
<b>no security http</b>	<b>G</b>	Disable IP security of HTTP server	switch(config)#no security http
<b>no security telnet</b>	<b>G</b>	Disable IP security of telnet server	switch(config)#no security telnet

### 6.3 Command Set List—Port Command Set

Commands	Level	Description	Example
<b>interface fastEthernet</b> [Portid]	<b>G</b>	Choose the port for modification.	switch(config)#interface fastEthernet 2
<b>duplex</b> [full   half]	<b>I</b>	Use the duplex configuration command to specify the duplex mode of operation for Fast Ethernet.	switch(config)#interface fastEthernet 2 switch(config-if)#duplex full
<b>speed</b> [10 100 1000 auto]	<b>I</b>	Use the speed configuration command to specify the speed mode of operation for Fast Ethernet., the speed can't be set to 1000 if the port isn't a giga port..	switch(config)#interface fastEthernet 2 switch(config-if)#speed 100
<b>flowcontrol mode</b> [Symmetric Asymmetric]	<b>I</b>	Use the flowcontrol configuration command on Ethernet ports to control traffic rates during congestion.	switch(config)#interface fastEthernet 2 switch(config-if)#flowcontrol mode Asymmetric
<b>no flowcontrol</b>	<b>I</b>	Disable flow control of interface	switch(config-if)#no flowcontrol
<b>security enable</b>	<b>I</b>	Enable security of interface	switch(config)#interface fastEthernet 2 switch(config-if)#security

			enable
<b>no security</b>	I	Disable security of interface	switch(config)#interface fastEthernet 2 switch(config-if)#no security
<b>bandwidth type all</b>	I	Set interface ingress limit frame type to “accept all frame”	switch(config)#interface fastEthernet 2 switch(config-if)#bandwidth type all
<b>bandwidth type broadcast-multicast -flooded-unicast</b>	I	Set interface ingress limit frame type to “accept broadcast, multicast, and flooded unicast frame”	switch(config)#interface fastEthernet 2 switch(config-if)#bandwidth type broadcast-multicast-flooded -unicast
<b>bandwidth type broadcast-multicast</b>	I	Set interface ingress limit frame type to “accept broadcast and multicast frame”	switch(config)#interface fastEthernet 2 switch(config-if)#bandwidth type broadcast-multicast
<b>bandwidth type broadcast-only</b>	I	Set interface ingress limit frame type to “only accept broadcast frame”	switch(config)#interface fastEthernet 2 switch(config-if)#bandwidth type broadcast-only
<b>bandwidth in</b> [Value]	I	Set interface input bandwidth. Rate Range is from 100 kbps to 102400 kbps or to 256000 kbps for giga ports, and zero means no limit.	switch(config)#interface fastEthernet 2 switch(config-if)#bandwidth in 100
<b>bandwidth out</b> [Value]	I	Set interface output bandwidth. Rate Range is from 100 kbps to 102400 kbps or to 256000 kbps for giga ports, and zero means no limit.	switch(config)#interface fastEthernet 2 switch(config-if)#bandwidth out 100
<b>show bandwidth</b>	I	Show interfaces bandwidth control	switch(config)#interface fastEthernet 2 switch(config-if)#show bandwidth

<b>state</b> [Enable   Disable]	I	Use the state interface configuration command to specify the state mode of operation for Ethernet ports. Use the disable form of this command to disable the port.	switch(config)#interface fastEthernet 2 switch(config-if)#state Disable
<b>show interface configuration</b>	I	show interface configuration status	switch(config)#interface fastEthernet 2 switch(config-if)#show interface configuration
<b>show interface status</b>	I	show interface actual status	switch(config)#interface fastEthernet 2 switch(config-if)#show interface status
<b>show interface accounting</b>	I	show interface statistic counter	switch(config)#interface fastEthernet 2 switch(config-if)#show interface accounting
<b>no accounting</b>	I	Clear interface accounting information	switch(config)#interface fastEthernet 2 switch(config-if)#no accounting

## 6.4 Command Set List—Trunk Command Set

Commands	Level	Description	Example
<b>aggregator priority</b> [1to65535]	G	Set port group system priority	switch(config)#aggregator priority 22
<b>aggregator activityport</b> [Port Numbers]	G	Set activity port	switch(config)#aggregator activityport 2
<b>aggregator group</b> [GroupID] [Port-list] <b>lacp</b>	G	Assign a trunk group with LACP active. [GroupID] :1to3	switch(config)#aggregator group 1 1-4 lacp workp 2 or

<b>workp</b> [Workport]		[Port-list]:Member port list, This parameter could be a port range(ex.1-4) or a port list separate by a comma(ex.2, 3, 6) [Workport]: The amount of work ports, this value could not be less than zero or be large than the amount of member ports.	switch(config)#aggregator group 2 1,4,3 lacp workp 3
<b>aggregator group</b> [GroupID] [Port-list] <b>nolacp</b>	<b>G</b>	Assign a static trunk group. [GroupID] :1to3 [Port-list]:Member port list, This parameter could be a port range(ex.1-4) or a port list separate by a comma(ex.2, 3, 6)	switch(config)#aggregator group 1 2-4 nolacp or switch(config)#aggregator group 1 3,1,2 nolacp
<b>show aggregator</b>	<b>P</b>	Show the information of trunk group	switch#show aggregator
<b>no aggregator lacp</b> [GroupID]	<b>G</b>	Disable the LACP function of trunk group	switch(config)#no aggregator lacp 1
<b>no aggregator group</b> [GroupID]	<b>G</b>	Remove a trunk group	switch(config)#no aggregator group 2

## 6.5 Command Set List—VLAN Command Set

Commands	Level	Description	Example
<b>vlan database</b>	<b>P</b>	Enter VLAN configure mode	switch#vlan database
<b>vlan</b> [8021q   gvrp]	<b>V</b>	To set switch VLAN mode.	switch(vlan)# vlanmode 802.1q or switch(vlan)# vlanmode gvrp
<b>no vlan</b> [VID]	<b>V</b>	Disable vlan group(by VID)	switch(vlan)#no vlan 2
<b>no gvrp</b>	<b>V</b>	Disable GVRP	switch(vlan)#no gvrp
<b>IEEE 802.1Q VLAN</b>			
<b>vlan 8021q port</b> [PortNumber] <b>access-link untag</b>	<b>V</b>	Assign a access link for VLAN by port, if the port belong to a trunk group, this command can't be	switch(vlan)#vlan 802.1q port 3 access-link untag 33

[UntaggedVID]		applied.	
<b>vlan 8021q port</b> [PortNumber] <b>trunk-link tag</b> [TaggedVID List]	V	Assign a trunk link for VLAN by port, if the port belong to a trunk group, this command can't be applied.	switch(vlan)#vlan 8021q port 3 trunk-link tag 2,3,6,99 or switch(vlan)#vlan 8021q port 3 trunk-link tag 3-20
<b>vlan 8021q port</b> [PortNumber] <b>hybrid-link untag tag</b> [UntaggedVID] [TaggedVID List]	V	Assign a hybrid link for VLAN by port, if the port belong to a trunk group, this command can't be applied.	switch(vlan)# vlan 8021q port 3 hybrid-link untag 4 tag 3,6,8 or switch(vlan)# vlan 8021q port 3 hybrid-link untag 5 tag 6-8
<b>vlan 8021q</b> <b>aggregator</b> [TrunkID] <b>access-link untag</b> [UntaggedVID]	V	Assign a access link for VLAN by trunk group	switch(vlan)#vlan 8021q aggregator 3 access-link untag 33
<b>vlan 8021q</b> <b>aggregator</b> [TrunkID] <b>trunk-link tag</b> [TaggedVID List]	V	Assign a trunk link for VLAN by trunk group	switch(vlan)#vlan 8021q aggregator 3 trunk-link tag 2,3,6,99 or switch(vlan)#vlan 8021q aggregator 3 trunk-link tag 3-20
<b>vlan 8021q</b> <b>aggregator</b> [PortNumber] <b>hybrid-link untag tag</b> [UntaggedVID] [TaggedVID List]	V	Assign a hybrid link for VLAN by trunk group	switch(vlan)# vlan 8021q aggregator 3 hybrid-link untag 4 tag 3,6,8 or switch(vlan)# vlan 8021q aggregator 3 hybrid-link untag 5 tag 6-8
<b>show vlan [VID]</b> or <b>show vlan</b>	V	Show VLAN information	switch(vlan)#show vlan 23

## 6.6 Command Set List—Spanning Tree Command Set

Commands	Level	Description	Example
<b>spanning-tree enable</b>	<b>G</b>	Enable spanning tree	switch(config)#spanning-tree enable
<b>spanning-tree priority [0to61440]</b>	<b>G</b>	Configure spanning tree priority parameter	switch(config)#spanning-tree priority 32767
<b>spanning-tree max-age [seconds]</b>	<b>G</b>	Use the spanning-tree max-age global configuration command to change the interval between messages the spanning tree receives from the root switch. If a switch does not receive a bridge protocol data unit (BPDU) message from the root switch within this interval, it recomputed the Spanning Tree Protocol (STP) topology.	switch(config)# spanning-tree max-age 15
<b>spanning-tree hello-time [seconds]</b>	<b>G</b>	Use the spanning-tree hello-time global configuration command to specify the interval between hello bridge protocol data units (BPDUs).	switch(config)#spanning-tree hello-time 3
<b>spanning-tree forward-time [seconds]</b>	<b>G</b>	Use the spanning-tree forward-time global configuration command to set the forwarding-time for the specified spanning-tree instances. The forwarding time determines how long each of the listening and learning states last before the port begins forwarding.	switch(config)# spanning-tree forward-time 20
<b>stp-path-cost [1to200000000]</b>	<b>I</b>	Use the spanning-tree cost interface configuration command to set the path cost for Spanning Tree Protocol (STP) calculations. In the event of a loop, spanning tree considers the path cost when selecting an interface to place into	switch(config)#interface fastEthernet 2 switch(config-if)#stp-path-cost 20

		the forwarding state.	
<b>stp-path-priority</b> [Port Priority]	<b>I</b>	Use the spanning-tree port-priority interface configuration command to configure a port priority that is used when two switches tie for position as the root switch.	switch(config)#interface fastEthernet 2 switch(config-if)# stp-path-priority 127
<b>stp-admin-p2p</b> [Auto True False]	<b>I</b>	Admin P2P of STP priority on this interface.	switch(config)#interface fastEthernet 2 switch(config-if)# stp-admin-p2p Auto
<b>stp-admin-edge</b> [True False]	<b>I</b>	Admin Edge of STP priority on this interface.	switch(config)#interface fastEthernet 2 switch(config-if)# stp-admin-edge True
<b>stp-admin-non-stp</b> [True False]	<b>I</b>	Admin NonSTP of STP priority on this interface.	switch(config)#interface fastEthernet 2 switch(config-if)# stp-admin-non-stp False
<b>Show spanning-tree</b>	<b>E</b>	Display a summary of the spanning-tree states.	switch>show spanning-tree
<b>no spanning-tree</b>	<b>G</b>	Disable spanning-tree.	switch(config)#no spanning-tree

## 6.7 Command Set List—QoS Command Set

Commands	Level	Description	Example
<b>qos policy</b> [weighted-fair strict]	<b>G</b>	Select QOS policy scheduling	switch(config)#qos policy weighted-fair
<b>qos prioritytype</b> [port-based cos-only tos-only cos-first tos-first]	<b>G</b>	Setting of QOS priority type	switch(config)#qos prioritytype
<b>qos priority portbased</b> [Port] [lowest low middle]	<b>G</b>	Configure Port-based Priority	switch(config)#qos priority portbased 1 low

high]			
<b>qos priority cos</b> [Priority][lowest low  middle high]	<b>G</b>	Configure COS Priority	switch(config)#qos priority cos 22 middle
<b>qos priority tos</b> [Priority][lowest low  middle high]	<b>G</b>	Configure TOS Priority	switch(config)#qos priority tos 3 high
<b>show qos</b>	<b>P</b>	Display the information of QoS configuration	switch>show qos
<b>no qos</b>	<b>G</b>	Disable QoS function	switch(config)#no qos

## 6.8 Command Set List—IGMP Command Set

Commands	Level	Description	Example
<b>igmp enable</b>	<b>G</b>	Enable IGMP snooping function	switch(config)#igmp enable
<b>igmp-query auto</b>	<b>G</b>	Set IGMP query to auto mode	switch(config)#igmp-query auto
<b>igmp-query force</b>	<b>G</b>	Set IGMP query to force mode	switch(config)#igmp-query force
<b>show igmp configuration</b>	<b>P</b>	Displays the details of an IGMP configuration.	switch#show igmp configuration
<b>show igmp multi</b>	<b>P</b>	Displays the details of an IGMP snooping entries.	switch#show igmp multi
<b>no igmp</b>	<b>G</b>	Disable IGMP snooping function	switch(config)#no igmp
<b>no igmp-query</b>	<b>G</b>	Disable IGMP query	switch#no igmp-query

## 6.9 Command Set List—MAC/Filter Table Command Set

Commands	Level	Description	Example
<b>mac-address-table static hwaddr</b> [MAC]	<b>I</b>	Configure MAC address table of interface (static).	switch(config)#interface fastEthernet 2 switch(config-if)#mac-addre ss-table static hwaddr 000012345678
<b>mac-address-table filter hwaddr</b>	<b>G</b>	Configure MAC address table(filter)	switch(config)#mac-address -table filter hwaddr

[MAC]			000012348678
<b>show</b> <b>mac-address-table</b>	<b>P</b>	Show all MAC address table	switch#show mac-address-table
<b>show</b> <b>mac-address-table</b> <b>static</b>	<b>P</b>	Show static MAC address table	switch#show mac-address-table static
<b>show</b> <b>mac-address-table</b> <b>filter</b>	<b>P</b>	Show filter MAC address table.	switch#show mac-address-table filter
<b>no</b> <b>mac-address-table</b> <b>static hwaddr</b> [MAC]	<b>I</b>	Remove an entry of MAC address table of interface (static)	switch(config)#interface fastEthernet 2 switch(config-if)#no mac-address-table static hwaddr 000012345678
<b>no</b> <b>mac-address-table</b> <b>filter hwaddr</b> [MAC]	<b>G</b>	Remove an entry of MAC address table (filter)	switch(config)#no mac-address-table filter hwaddr 000012348678
<b>no</b> <b>mac-address-table</b>	<b>G</b>	Remove dynamic entry of MAC address table	switch(config)#no mac-address-table

## 6.10 Command Set List—SNMP Command Set

Commands	Level	Description	Example
<b>snmp agent-mode</b> [v1v2c   v3]	<b>G</b>	Select the agent mode of SNMP	switch(config)#snmp agent-mode v1v2c
<b>snmp-server host</b> [IP address] <b>community</b> [Community-string] <b>trap-version</b> [v1 v2c]	<b>G</b>	Configure SNMP server host information and community string	switch(config)#snmp-server host 192.168.10.50 community public trap-version v1 (remove) Switch(config)# no snmp-server host 192.168.10.50
<b>snmp</b> <b>community-strings</b>	<b>G</b>	Configure the community string right	switch(config)#snmp community-strings public

[Community-string] <b>right</b> [RO RW]			right RO or switch(config)#snmp community-strings public right RW
<b>snmp snmpv3-user</b> [User Name] <b>password</b> [Authentication Password] [Privacy Password]	<b>G</b>	Configure the userprofile for SNMPV3 agent. Privacy password could be empty.	switch(config)#snmp snmpv3-user test01 password AuthPW PrivPW
<b>show snmp</b>	<b>P</b>	Show SNMP configuration	switch#show snmp
<b>show snmp-server</b>	<b>P</b>	Show specified trap server information	switch#show snmp-server
<b>no snmp community-strings</b> [Community]	<b>G</b>	Remove the specified community.	switch(config)#no snmp community-strings public
<b>no snmp snmpv3-user</b> [User Name] <b>password</b> [Authentication Password] [Privacy Password]	<b>G</b>	Remove specified user of SNMPv3 agent. Privacy password could be empty.	switch(config)# no snmp snmpv3-user test01 password AuthPW PrivPW
<b>no snmp-server host</b> [Host-address]	<b>G</b>	Remove the SNMP server host.	switch(config)#no snmp-server 192.168.10.50

### 6.11 Command Set List—Port Mirroring Command Set

Commands	Level	Description	Example
<b>monitor rx</b>	<b>G</b>	Set RX destination port of monitor function	switch(config)#monitor rx
<b>monitor tx</b>	<b>G</b>	Set TX destination port of monitor function	switch(config)#monitor tx
<b>show monitor</b>	<b>P</b>	Show port monitor information	switch#show monitor

<b>monitor</b> [RX TX Both]	I	Configure source port of monitor function	switch(config)#interface fastEthernet 2 switch(config-if)#monitor RX
<b>show monitor</b>	I	Show port monitor information	switch(config)#interface fastEthernet 2 switch(config-if)#show monitor
<b>no monitor</b>	I	Disable source port of monitor function	switch(config)#interface fastEthernet 2 switch(config-if)#no monitor

## 6.12 Command Set List—802.1x Command Set

Commands	Level	Description	Example
<b>8021x enable</b>	G	Use the 802.1x global configuration command to enable 802.1x protocols.	switch(config)# 8021x enable
<b>8021x system radiusip</b> [IP address]	G	Use the 802.1x system radius IP global configuration command to change the radius server IP.	switch(config)# 8021x system radiusip 192.168.1.1
<b>8021x system serverport</b> [port ID]	G	Use the 802.1x system server port global configuration command to change the radius server port	switch(config)# 8021x system serverport 1815
<b>8021x system accountport</b> [port ID]	G	Use the 802.1x system account port global configuration command to change the accounting port	switch(config)# 8021x system accountport 1816
<b>8021x system sharekey</b> [ID]	G	Use the 802.1x system share key global configuration command to change the shared key value.	switch(config)# 8021x system sharekey 123456
<b>8021x system nasid</b> [words]	G	Use the 802.1x system nasid global configuration command to change the NAS ID	switch(config)# 8021x system nasid test1

<b>8021x misc quietperiod</b> [sec.]	<b>G</b>	Use the 802.1x misc quiet period global configuration command to specify the quiet period value of the switch.	switch(config)# 8021x misc quietperiod 10
<b>8021x misc txperiod</b> [sec.]	<b>G</b>	Use the 802.1x misc TX period global configuration command to set the TX period.	switch(config)# 8021x misc txperiod 5
<b>8021x misc supportimeout</b> [sec.]	<b>G</b>	Use the 802.1x misc supp timeout global configuration command to set the supplicant timeout.	switch(config)# 8021x misc supportimeout 20
<b>8021x misc servertimeout</b> [sec.]	<b>G</b>	Use the 802.1x misc server timeout global configuration command to set the server timeout.	switch(config)#8021x misc servertimeout 20
<b>8021x misc maxrequest</b> [number]	<b>G</b>	Use the 802.1x misc max request global configuration command to set the MAX requests.	switch(config)# 8021x misc maxrequest 3
<b>8021x misc reauthperiod</b> [sec.]	<b>G</b>	Use the 802.1x misc reauth period global configuration command to set the reauth period.	switch(config)# 8021x misc reauthperiod 3000
<b>8021x portstate</b> [disable   reject   accept   authorize]	<b>I</b>	Use the 802.1x port state interface configuration command to set the state of the selected port.	switch(config)#interface fastethernet 3 switch(config-if)#8021x portstate accept
<b>show 8021x</b>	<b>E</b>	Display a summary of the 802.1x properties and also the port sates.	switch>show 8021x
<b>no 8021x</b>	<b>G</b>	Disable 802.1x function	switch(config)#no 8021x

### 6.13 Command Set List—TFTP Command Set

Commands	Level	Description	Defaults Example
<b>backup</b>	<b>G</b>	Save configuration to TFTP and	switch(config)#backup

<a href="#">flash:backup_cfg</a>		need to specify the IP of TFTP server and the file name of image.	flash:backup_cfg
<a href="#">restore</a> <a href="#">flash:restore_cfg</a>	<b>G</b>	Get configuration from TFTP server and need to specify the IP of TFTP server and the file name of image.	switch(config)#restore flash:restore_cfg
<a href="#">upgrade</a> <a href="#">flash:upgrade_fw</a>	<b>G</b>	Upgrade firmware by TFTP and need to specify the IP of TFTP server and the file name of image.	switch(config)#upgrade lash:upgrade_fw

### 6.14 Command Set List—SYSLOG, SMTP, EVENT Command Set

Commands	Level	Description	Example
<a href="#">systemlog ip</a> [IP address]	<b>G</b>	Set System log server IP address.	switch(config)# systemlog ip 192.168.1.100
<a href="#">systemlog mode</a> [client server both]	<b>G</b>	Specified the log mode	switch(config)# systemlog mode both
<a href="#">show systemlog</a>	<b>E</b>	Display system log.	Switch>show systemlog
<a href="#">show systemlog</a>	<b>P</b>	Show system log client & server information	switch#show systemlog
<a href="#">no systemlog</a>	<b>G</b>	Disable systemlog functon	switch(config)#no systemlog
<a href="#">smtp enable</a>	<b>G</b>	Enable SMTP function	switch(config)#smtp enable
<a href="#">smtp serverip</a> [IP address]	<b>G</b>	Configure SMTP server IP	switch(config)#smtp serverip 192.168.1.5
<a href="#">smtp authentication</a>	<b>G</b>	Enable SMTP authentication	switch(config)#smtp authentication
<a href="#">smtp account</a> [account]	<b>G</b>	Configure authentication account	switch(config)#smtp account User
<a href="#">smtp password</a> [password]	<b>G</b>	Configure authentication password	switch(config)#smtp password
<a href="#">smtp rcptemail</a> [Index] [Email address]	<b>G</b>	Configure Rcpt e-mail Address	switch(config)#smtp rcptemail 1 <a href="mailto:Alert@test.com">Alert@test.com</a>
<a href="#">show smtp</a>	<b>P</b>	Show the information of SMTP	switch#show smtp
<a href="#">no smtp</a>	<b>G</b>	Disable SMTP function	switch(config)#no smtp
<a href="#">event</a>	<b>G</b>	Set cold start event type	switch(config)#event

<b>device-cold-start</b> [Systemlog SMTP Both]			device-cold-start both
<b>event authentication-failure</b> [Systemlog SMTP Both]	<b>G</b>	Set Authentication failure event type	switch(config)#event authentication-failure both
<b>event O-Ring-topology-change</b> [Systemlog SMTP Both]	<b>G</b>	Set s ring topology changed event type	switch(config)#event ring-topology-change both
<b>event systemlog</b> [Link-UP Link-Down Both]	<b>I</b>	Set port event for system log	switch(config)#interface fastethernet 3 switch(config-if)#event systemlog both
<b>event smtp</b> [Link-UP Link-Down Both]	<b>I</b>	Set port event for SMTP	switch(config)#interface fastethernet 3 switch(config-if)#event smtp both
<b>show event</b>	<b>P</b>	Show event selection	switch#show event
<b>no event device-cold-start</b>	<b>G</b>	Disable cold start event type	switch(config)#no event device-cold-start
<b>no event authentication-failure</b>	<b>G</b>	Disable Authentication failure event typ	switch(config)#no event authentication-failure
<b>no event O-Ring-topology-change</b>	<b>G</b>	Disable O-Ring topology changed event type	switch(config)#no event ring-topology-change
<b>no event systemlog</b>	<b>I</b>	Disable port event for system log	switch(config)#interface fastethernet 3 switch(config-if)#no event systemlog
<b>no event smtp</b>	<b>I</b>	Disable port event for SMTP	switch(config)#interface fastethernet 3

			switch(config-if)#no event smtp
<b>show systemlog</b>	<b>P</b>	Show system log client & server information	switch#show systemlog

## 6.15 Command Set List—SNTP Command Set

Commands	Level	Description	Example
<b>sntp enable</b>	<b>G</b>	Enable SNTP function	switch(config)#sntp enable
<b>sntp daylight</b>	<b>G</b>	Enable daylight saving time, if SNTP function is inactive, this command can't be applied.	switch(config)#sntp daylight
<b>sntp daylight-period</b> [Start time] [End time]	<b>G</b>	Set period of daylight saving time, if SNTP function is inactive, this command can't be applied. Parameter format: [yyyymmdd-hh:mm]	switch(config)# sntp daylight-period 20060101-01:01 20060202-01-01
<b>sntp daylight-offset</b> [Minute]	<b>G</b>	Set offset of daylight saving time, if SNTP function is inactive, this command can't be applied.	switch(config)#sntp daylight-offset 3
<b>sntp ip</b> [IP]	<b>G</b>	Set SNTP server IP, if SNTP function is inactive, this command can't be applied.	switch(config)#sntp ip 192.169.1.1
<b>sntp timezone</b> [Timezone]	<b>G</b>	Set timezone index, use "show sntp timzezone" command to get more information of index number	switch(config)#sntp timezone 22
<b>show sntp</b>	<b>P</b>	Show SNTP information	switch#show sntp
<b>show sntp timezone</b>	<b>P</b>	Show index number of time zone list	switch#show sntp timezone list
<b>no sntp</b>	<b>G</b>	Disable SNTP function	switch(config)#no sntp
<b>no sntp daylight</b>	<b>G</b>	Disable daylight saving time	switch(config)#no sntp daylight

## 6.16 Command Set List—O-Ring Command Set

Commands	Level	Description	Example
<b>Ring enable</b>	<b>G</b>	Enable O-Ring	switch(config)# ring enable
<b>Ring master</b>	<b>G</b>	Enable ring master	switch(config)# ring master
<b>Ring couplering</b>	<b>G</b>	Enable couple ring	switch(config)# ring couplering
<b>Ring dualhoming</b>	<b>G</b>	Enable dual homing	switch(config)# ring dualhoming
<b>Ring ringport</b> [1st Ring Port] [2nd Ring Port]	<b>G</b>	Configure 1st/2nd Ring Port	switch(config)# ring ringport 7 8
<b>Ring couplingport</b> [Coupling Port]	<b>G</b>	Configure Coupling Port	switch(config)# ring couplingport 1
<b>Ring controlport</b> [Control Port]	<b>G</b>	Configure Control Port	switch(config)# ring controlport 2
<b>Ring homingport</b> [Dual Homing Port]	<b>G</b>	Configure Dual Homing Port	switch(config)# ring homingport 3
<b>show Ring</b>	<b>P</b>	Show the information of O-Ring	switch#show ring
<b>no Ring</b>	<b>G</b>	Disable O-Ring	switch(config)#no ring
<b>no Ring master</b>	<b>G</b>	Disable ring master	switch(config)# no ring master
<b>no Ring couplering</b>	<b>G</b>	Disable couple ring	switch(config)# no ring couplering
<b>no Ring dualhoming</b>	<b>G</b>	Disable dual homing	switch(config)# no ring dualhoming

# Technical Specifications

<b>ORing Switch Model</b>	IES-3082GC
<b>Physical Ports</b>	
10/100 Base-T(X) Ports in RJ45 Auto MDI/MDIX	8
Gigabit Combo Ports with 10/100/1000Base-T(X) and 100/1000Base-X SFP port	2
<b>Technology</b>	
Ethernet Standards	IEEE 802.3 for 10Base-T IEEE 802.3u for 100Base-TX and 100Base-FX IEEE 802.3z for 1000Base-X IEEE 802.3ab for 1000Base-T IEEE 802.3x for Flow control IEEE 802.3ad for LACP (Link Aggregation Control Protocol ) IEEE 802.1D for STP (Spanning Tree Protocol) IEEE 802.1p for COS (Class of Service) IEEE 802.1Q for VLAN Tagging IEEE 802.1w for RSTP (Rapid Spanning Tree Protocol) IEEE 802.1s for MSTP (Multiple Spanning Tree Protocol) IEEE 802.1x for Authentication IEEE 802.1AB for LLDP (Link Layer Discovery Protocol)
MAC Table	8192 MAC addresses
Priority Queues	4
Processing	Store-and-Forward
Switch Properties	Switching latency: 7 us Switching bandwidth: 5.6Gbps Max. Number of Available VLANs: 4096 IGMP multicast groups: 1024 Port rate limiting: User Define
Security Features	Enable/disable ports, MAC based port security Port based network access control (802.1x) VLAN (802.1Q ) to segregate and secure network traffic Supports Q-in-Q VLAN for performance & security to expand the VLAN space Radius centralized password management SNMP v1/v2c/v3 encrypted authentication and access security
Software Features	STP/RSTP/MSTP (IEEE 802.1D/w/s) Redundant Ring (O-Ring) with recovery time less than 10ms over 250 units TOS/Diffserv supported Quality of Service (802.1p) for real-time traffic VLAN (802.1Q) with VLAN tagging and GVRP supported IGMP Snooping for multicast filtering Port configuration, status, statistics, monitoring, security SNTP for synchronizing of clocks over network Support <b>PTP Client</b> (Precision Time Protocol) clock synchronization DHCP Server / Client support Port Trunk support MVR (Multicast VLAN Registration) support Modbus TCP
Network Redundancy	O-Ring Open-Ring O-Chain MRP STP/RSTP/MSTP
Warning / Monitoring System	Relay output for fault event alarming Syslog server / client to record and view events Include SMTP for event warning notification via email

	Event selection support
DDM Function	Voltage / Current / Temperature
RS-232 Serial Console Port	RS-232 in RJ45 connector with console cable. 9600bps, 8, N, 1
<b>LED Indicators</b>	
Power	Green : Power LED x 3
O-Ring Indicator	Green : Indicate system operated in O-Ring mode
R.M. indicator	Green : Indicate system operated in O-Ring Master mode
Fault indicator	Amber : Indicate unexpected event occurred
10/100Base-T(X) RJ45 Port Indicator	Green for port Link/Act. Amber for Duplex/Collision
10/100/1000Base-T(X) RJ45 Port Indicator	Green for Link/Act. Amber for 100Mbps indicator
100/1000Base-X Fiber Port Indicator	Green for port Link/Act.
<b>Fault contact</b>	
Relay	Relay output to carry capacity of 1A at 24VDC
<b>Power</b>	
Redundant Input Power	Dual DC inputs. 12~48VDC on 6-pin screw type terminal block
Overload Current Protection	Present
Reverse polarity protection	Present
<b>Physical Characteristic</b>	
Enclosure	IP-30
Dimension (W x D x H)	74.3(W) x 109.2(D) x 153.6(H)mm (2.93 x 4.30 x 6.05 inches)
<b>Environmental</b>	
Storage Temperature	-40 to 85°C (-40 to 185°F)
Operating Temperature	-40 to 70°C (-40 to 158°F)
Operating Humidity	5% to 95% Non-condensing
<b>Regulatory approvals</b>	
EMI	FCC Part 15, CISPR (EN55022) class A, EN50155 (EN50121-3-2, EN55011, EN50121-4)
EMS	EN61000-4-2 (ESD), EN61000-4-3 (RS), EN61000-4-4 (EFT), EN61000-4-5 (Surge), EN61000-4-6 (CS), EN61000-4-8, EN61000-4-11
Shock	IEC60068-2-27
Free Fall	IEC60068-2-32
Vibration	IEC60068-2-6
Safety	EN60950-1
<b>Warranty</b>	5 years
